Abstract

What do we gain from the scientific study of religion? One possibility is that religious contexts are unique, and cognition within these contexts is worth understanding. Another possibility is that religion can be viewed as a laboratory for understanding psychology and culture more broadly. Rather than limiting the study of religion to a single context, I argue that the study of religion is useful precisely because it illuminates secular psychological and cultural processes. I first outline my practical approach to psychology and religion, focusing on how people use religion to advance mundane goals. I then discuss several domains in which studying religion has led to important insights, including culture, prejudice, and cognition. This article is an extended version of an Early Career Award address given at the International Association for the Psychology of Religion meeting in 2023 in Groningen, Netherlands.

Keywords

Culture, evolution, morality, religion

Most researchers who study religion are especially interested in belief: Why do people hold certain types of beliefs about deities? What are the consequences of these beliefs? How do people engage with sacred concepts? And how are these sacred concepts different from the secular?

It is perhaps intuitive to think that, for religion to be an important topic of study, it must offer something wholly unique—religious cognition should look in some way distinct from anything we see in secular contexts, or the powerful combinations of emotions religions evoke must be somehow exceptional. Some researchers have used the specialness of religion as justification for why religion is important (Pargament, 2002); similarly, some who view religion as simply reflecting mundane mechanisms agree with the premise that if religion is not special, then it is not worth studying (Funder, 2002).
