Early Childhood Development in Sub-Saharan Africa: Policy and Programs

As Sub-Saharan Africa contends with persistent poverty, rapid population growth, and erosion of traditional family support structures, investment in early child development (ECD) is imperative. Investments must begin from birth and include health, nutrition, and attention to cognitive and social development to take children up to the transition into primary school. Broad-based investment in young children's survival and development should be a vital part of countries' systematic pursuit of social and economic development.

This study, *Review of Early Childhood Development Policy and Programs in Sub-Saharan Africa*, is the second in a series of three studies conducted under the World Bank's Africa Regional ECD Initiative. The first described the condition of young children in Africa and pointed to the benefits of ECD in increased efficiency of primary and secondary school investments, children's enhanced economic contribution to society, and the reduction of social inequity. The third study will synthesize lessons drawn from the preceding two studies and from case studies in Kenya, South Africa and Mauritius.

There are models of success

The findings of this *Review* are that weakened family and public social sector support for child development create a tremendous need for complementary and alternative forms of child care, and that there are models. The *Review* selects eleven case studies from across the Sub-Saharan region to illustrate a range of possibilities for an integrated response to the physical, socio-emotional, cognitive, economic and cultural dimensions of young children's development, so that impact is maximized through the interconnectedness of investments.

The policies and programs reviewed are shown in Table 1. Almost all of the programs have multiple objectives. The scope most often is determined by the extent to which existing delivery systems in education, health, grassroots organizations and others can be utilized innovatively and more effectively. The variation in program objectives translates into target populations that include not only children but also parents and others who figure in children's physical growth
