Low Tech:

Low-tech Innovation Oliver Som, Eva Kirner, 2014-10-28 This book highlights the economic relevance of the so called low tech industries and firms Non R D intensive firms continue to be the economic backbone of several developed industrial countries They form the core of National Innovation Systems and contribute significantly to growth and employment However due to their lack of R D activity they are easily overlooked in the general innovation debate This book provides latest empirical findings on the current economic relevance and specific innovation strategies and management of non R D intensive firms in Germany It discusses their future role in a knowledge driven economy as well as possible implications for innovation and technology policy An outcome of several years of dedicated research conducted at the Fraunhofer Institute for Systems and Innovation Research ISI this book will prove of immense value to researchers and policy makers dealing with innovation and knowledge strategy

Low-tech Magazine 2012-2018 Kris De Decker, 2019-03-18 Low tech Magazine underscores the potential of past and often forgotten technologies and how they can inform sustainable energy practices Sometimes past technologies can be copied without any changes More often interesting possibilities arise when older technology is combined with new knowledge and new materials or when past concepts and traditional knowledge are applied to modern technology Inspiration is also to be found in the so called developing world where resource constraints often lead to inventive low tech solutions

High Tech, Low Tech, No Tech William W. Falk, Thomas A. Lyson, 1988-08-29 Fifty years ago the quality of life in the 13 states of the Old South was judged to be among the lowest in the country A lack of industrial development and the pervasiveness of a sharecropping system of agricultural production combined to keep the South mired in the backwaters of the American economy Over the past five decades however the South has moved to the forefront as an area of economic growth The authors show that significant improvements have taken place almost entirely in and around the major cities Rural areas especially those with a high percentage of blacks remain saddled with an economic base dominated almost entirely by slow growing stagnating and declining industries The uneven development of the region is the result of a set of industrial policies in which communities attempt to lure prospective employers with lucrative business incentive packages Guarantees of cheap unorganized labor tax holidays and giveaways of land and buildings are some of the chips community leaders use in this high stakes game Rural communities are often caught in bidding wars among themselves in which they are forced to offer even more lucrative incentives and in the process reallocate resources away from needed human services Consequently Falk and Lyson target the need for a national industrial policy that will bring some order to the industrial recruitment process

The Age of Low Tech Philippe Bihouix, 2020-10-21 People often believe that we can overcome the profound environmental and climate crises we face by smart systems green innovations and more recycling However the quest for complex technological solutions which rely on increasingly exotic and scarce materials makes this unlikely A best seller in France this English language edition introduces readers to an alternative perspective on how we

should be marshalling our resources to preserve the planet and secure our future Bihouix skilfully goes against the grain to argue that high technology will not solve global problems and envisages a different approach to build a more resilient and sustainable society Low-Cost, Low-Tech Innovation Vijay Vyas, 2014-11-13 Like much of SMEs research innovation studies of small enterprises have commenced later and are less numerous The focus of such studies remains high technology enterprises which continue to attract both academic and popular interest oblivious to the innovative endeavours of people in traditional low tech industries This book attempts to address this imbalance through a comprehensive analysis of innovation in this largely neglected area Based on case studies of seven small innovative food companies this book presents an in depth analysis of innovation in the Scottish food and drinks industry and unravels a lesser known approach to effective low cost product innovation which is simple and economical yet elegant and successful Using careful data collection and rigorous statistical testing the analysis and findings in this book address a wide spectrum of interests academics in business schools policy makers in governments and executives and entrepreneurs in food and other low technology sectors

Knowledge-Intensive Entrepreneurship in Low-Tech Industries Hartmut Hirsch-Kreinsen, Isabel Schwing, 2014-05-30 This book will appeal to social scientists economists and students of innovation and entrepreneurship studies Policy makers and company representatives will also find much of interest in this book with its surprising insights into a field that has b **Innovation in Low-tech Firms and Industries** Hartmut Hirsch-Kreinsen, David Jacobson, 2008-01-01 This very valuable book collects together excellent empirical essays on what amounts to a silent majority in advanced industrial societies low and medium tech manufacturing industries Such industries employ more people and make a larger contribution to aggregate value creation than their more lauded high tech counterparts and moreover they constitute extremely important customer industries for such higher tech producers They may be neglected but they are not going away indeed this volume shows that they are growing and adapting to the new competitive challenges of globalization Attending to the dynamics of innovation and change in this large sector is crucial for understanding processes of social and economic restructuring in Europe today The essays in this volume are the first place to look for insight into this extremely important area of political economic life in Europe Gary Herrigel University of Chicago US **Innovation in Low Tech Firms and Industries** challenges the currently fashionable notion that the advent of a knowledge based economy demands that all social resources should be diverted to high technology industries Hirsch Kreinsen and Jacobson point out these constitute a small part of even the most advanced economies Attention has been diverted from the important innovation processes which occur in low and medium technology LMT sectors This volume calls on us to achieve a much better and wiser balance in our industrial policy Terrence McDonough National University of Ireland Galway The authors of this book make an urgently needed provocative point ordinary engineering and technology low tech continue to be of greater importance in our knowledge society than high tech activities and they may be similarly demanding by the competence they require and

produce This counteracts the exaggerated hype about high tech firms or activities The high tech classification itself is highly arbitrary and often superficial The authors show in what way low tech activities and firms are important and how they can be cultivated to buttress the economic strength of industrial and post industrial nations Researchers and policymakers please take note Arndt Sorge Wissenschaftszentrum Berlin Germany and University of Groningen The Netherlands It is a general understanding that the advanced economies are currently undergoing a fundamental transformation into knowledge based societies There is a firm belief that this is based on the development of high tech industries Correspondingly in this scenario low tech sectors appear to be less important A critique of this widely held belief is the starting point of this book It is often overlooked that many of the current innovation activities are linked to developments inside the realm of low tech Thus the general objective of the book is to contribute to a discussion concerning the relevance of low tech industries for industrial innovativeness in the emerging knowledge economy Providing examples of both theoretical and empirical research in this area Innovation in Low tech Firms and Industries will be of great interest to postgraduate students and academic researchers in innovation studies It will also appeal to policy makers in the field of innovation policy as well as industrial economists and sociologists interested in traditional industries in advanced economies The Paradox of Knowledge-Intensive Entrepreneurship in Low-Tech Industries Isabel Schwinge, 2015-07-22 This book presents the first multidimensional investigation of KIE in the context of low tech industries and gives insights in paradox conditions and specific mechanisms using the example of the German textile industry Therefore the author solves conceptual inconsistencies and develops an alternative framework referring to systemic concepts of sectoral innovation systems and KIE as well as to the concept of institutional entrepreneurs As a result the deviation of willful actors from a restricting institutional environment and sources of entrepreneurial opportunities can be investigated more comprehensively **Rural Development Perspectives**, 1989-10

Handbook on Small Nations in the Global Economy D. van den Bulcke, Alain Verbeke, Wenlong Yuan, 2009 These studies of the international competitiveness of small open economies demonstrate the critical importance of foreign direct investment as an engine of economic development multinational enterprises are the key drivers of international competitiveness Alan M Rugman University of Reading UK Globalization has made every country small The global economic crisis has made sure that every country has increasingly realised that it is open and vulnerable as well This volume is both timely and relevant Small country studies should become mainstream for scholars in business economics and politics Rob van Tulder RSM Erasmus University the Netherlands This book provides a fresh and clear eyed view of the relationship between multinationals and location advantages of countries It is one of the first attempts to build a constructive bridge between the theory of international business and the outstanding contribution of Michael Porter about the drivers of competitiveness The authors address crucial issues demanding the attention of teachers researchers practitioners and political leaders Philippe Gugler University of Fribourg Switzerland This unique extensive Handbook illustrates that multinational enterprises can

contribute substantially to the competitive advantage of small countries. It advances the notion that small nations increasingly need to rely on both home grown and foreign multinational enterprises to achieve domestic economic success in industries characterized by international competition. The expert contributors explore the roles of firms in a range of small successful open economies driven by such multinational enterprises across the globe. They juxtapose country data sets against Professor Michael Porter's paradigm of single diamond components and show that these single diamond components reflect merely a set of initial conditions which can be improved upon through both inward and outward direct investment. Concluding that multinational enterprises create resource linkages between the home and host environments in which they operate, this Handbook proves to be a fascinating read for academics, students and researchers with an interest in business and management, economics and international economics.

Environmental Communication Anabela Carvalho, Tarla Rai Peterson, 2024-12-30. This handbook reviews extant research and offers critical summaries of key topics and issues in the field, enriched by authoritative analyses of specific cases and examples. It displays pluralism across a number of axes: epistemological, theoretical, geographical, cultural and thematic. The first part offers historical routes through the international development of the field and explores the epistemological grounds of multiple strands of environmental communication studies. In aiming to map the field broadly as well as stimulating new thinking, the second part is organized along three core perspectives: arenas, voice and place. It comprises chapters on various public spaces that are critical to the symbolic constitution of the environment and sheds light on a range of aspects and social agents that have received insufficient attention, including research about and carried out in non-Western countries. Crucially, at a time of profound environmental crisis, the final part of this book discusses possibilities and constraints to social change and the potential contributions of environmental communication research to ways of understanding and responding to the challenge.

Innovation Policy in the Knowledge-Based Economy M.P. Feldman,Albert N. Link,2001-02-28 Scholars in the science and technology field have not collectively questioned much less proposed an agenda for policy makers Now is an appropriate time for such an undertaking First there is a growing belief that the U S national research and development system like that of many industrial nations is changing due to global competitive pressures and advancements in information technology and electronic commerce Second industry s R D relationship with the academic research community is changing not only because of the global competition but also because of alterations in the level of government support of fundamental research As a result policy makers will need to rethink their approaches to science and technology issues This volume is a collection of essays by scholars about innovative policy in the knowledge based economy By knowledge based economy we mean one for which economic growth is based on the creation distribution and use of technology As such innovation policy in such an economy must enhance the creation distribution and use of knowledge that leads to the creation distribution and use of technology This volume considers elements of an innovation policy innovation policy and academic research innovation policy in electronic commerce and innovation policy and globalization issues

Pregnancy in a High-tech Age Robin Gregg,1995-04 Too often in the debate over reproductive rights and technologies we lose sight of the fundamental emotional and psychological issues that define the experience of pregnancy Robin Gregg here draws on the words and stories of over thirty women to provide a first hand perspective on pregnancy in the modern age In an age where a new advance in reproductive technology occurs seemingly every month pregnancy has come to be defined by such medical procedures as prenatal screening amniocentesis fetal monitoring induced labor and cesarean sections Public policymakers ethicists religious figures and the medical establishment control the debate drowning out the voices of women who grapple in the most immediate sense with the issues Even feminist theorists often overlook the nuances and paradoxes of the reproductive revolution as experienced by individual particular women The reader follows these thirty women as they speak about whether to become pregnant and by what means how to choose a health provider

what meaning they attribute to their pregnancies and how they navigate their way through the contradictory pressures they face during pregnancy The intimate nature of Gregg s research consisting as it does largely of women s pregnancy narratives lends her book a vibrancy often lacking in academic writing about reproduction Intangible Assets, Productivity and Economic Growth Carter Bloch,Aimilia Protogerou,Nicholas S.
