G. Kostorz, H. A. Calderon, J. L. Martin, 2013-09-03 **Fundamental Aspects of Dislocation Interactions** Low Energy Dislocation  
Structures III covers the papers presented at a European Research Conference on Plasticity of Materials **Fundamental**  
**Aspects of Dislocation Interactions** Low Energy Dislocation Structures III held on August 30 September 4 1992 in Ascona  
Switzerland The book focuses on the processes technologies reactions transformations and approaches involved in  
dislocation interactions The selection first offers information on work softening and Hall Petch hardening in extruded  
mechanically alloyed alloys and dynamic origin of dislocation structures in deformed solids Discussions focus on stress strain  
behavior in relation to composition structure and annealing comparison of stress strain curves with work softening theory  
sweeping and trapping mechanism and model of dipolar wall structure formation The text then ponders on plastic  
instabilities and their relation to fracture and dislocation and kink dynamics in f c c metals studied by mechanical  
spectroscopy The book takes a look at misfit dislocation generation mechanisms in heterostructures and evolution of  
dislocation structure on the interfaces associated with diffusionless phase transitions Discussions focus on dislocation  
representation of a wall of elastic domains equation of equilibrium of an elastic domain transformation of dislocations and  
theoretical and experimental background The selection is a valuable reference for readers interested in dislocation

Dislocations are lines of irregularity in the structure of a solid analogous to the bumps in a badly laid carpet. Like these bumps, they can be easily moved and they provide the most important mechanism by which the solid can be deformed. They also have a strong influence on crystal growth and on the electronic properties of semiconductors. **Containing Papers Presented at a European Research Conference on Plasticity of Materials - Fundamental Aspects of Dislocation Interactions: Low-Energy Dislocation Structures III** Gernot Kosterz, 1993 **Proceedings of the International Conference on Low Energy Dislocation Structures, Charlottesville, VA, U.S.A., August 10-14, 1986**, 1986

The scope and purpose of the second international conference on low energy dislocation structures was to examine the extent to which the concepts of dislocation energy minimization per unit line length have been successfully incorporated into those areas of interest in which these concepts have traditionally been ignored such as fracture, radiation damage, highly deformed materials, and friction wear. The fruitful and extensive application of the LEDS concepts in such areas as epitaxy and crystal growth serve as a useful basis for comparison. **Keywords:** Crystal growth, Low energy dislocation structures, Conference, Epitaxy, LEDS concept.
