Pollock, Walter R. Bosenberg, 1997

**Lasers** Charles Blain, 2002 Developments in lasers continue to enable progress in many areas such as eye surgery the recording industry and dozens of others This book presents citations from the book literature for the last 25 years and groups them for ease of access which is also provided by subject author and titles indexes

The Physics and Engineering of Solid State Lasers Yehoshua Y. Kalisky, 2006 This text explains the mutual influences between the physical and dynamic processes in solids and their lasing properties It provides insight into the physics and engineering of solid state lasers by integrating information from several disciplines including solid state physics materials science photophysics and dynamic processes in solids The text discusses approaches to developing new laser materials and includes data tables of basic parameters that can be applied to laser design Novel materials and techniques used in recent developments are also covered

Tunable Solid State Lasers for Remote Sensing Robert L. Byer, Eric K. Gustafson, Rick Trebino, 2013-06-29 The Workshop on Tunable Solid State Lasers for Remote Sensing was held at Stanford University in October 1984 to assess the state of the art in tunable solid state lasers for remote sensing from satellite platforms The value of conducting global remote sensing measurements of atmospheric chemistry climate and weather in the 1990s is now established What is not yet defined however is the status of the developing tunable laser technology that must meet both the scientific requirements and the space platform constraints This workshop was convened by the Office of Aeronautics and Space Technology OAST of the National Aeronautics and Space Administration NASA to assess the status and progress in tunable solid state laser sources for remote sensing The workshop was organized to facilitate information exchange across a number of technologies from remote sensing requirements to crystal growth of the materials important for the development of the tunable laser sources The emphasis was on the recent developments in tunable solid state laser sources necessary to meet the future transmitter requirements for global remote sensing A goal of the workshop was to form recommendations to NASA on the current and future prospects for solid state laser technology that will allow remote sensing measurements from air shuttle and free flying satellite platforms The emphasis was on solid state laser sources because they offer the best potential for meeting the demanding requirements of compact size good efficiency and long operational

lifetimes required for future space station and free flying platform operation      **Solid-State Lasers and Applications**

Alphan Sennaroglu, 2017-12-19 Because of the favorable characteristics of solid state lasers they have become the preferred candidates for a wide range of applications in science and technology including spectroscopy atmospheric monitoring micromachining and precision metrology Presenting the most recent developments in the field *Solid State Lasers and Applications* focuses on the design and applications of solid state laser systems With contributions from leading international experts the book explores the latest research results and applications of solid state lasers as well as various laser systems The beginning chapters discuss current developments and applications of new solid state gain media in different wavelength regions including cerium doped lasers in the ultraviolet range ytterbium lasers near 1  $\mu$ m rare earth ion doped lasers in the eye safe region and tunable Cr<sup>2+</sup>/ZnSe lasers in the mid infrared range The remaining chapters study specific modes of operation of solid state laser systems such as pulsed microchip lasers high power neodymium lasers ultrafast solid state lasers amplification of femtosecond pulses with optical parametric amplifiers and noise characteristics of solid state lasers *Solid State Lasers and Applications* covers the most important aspects of the field to provide current comprehensive coverage of solid state lasers      **Nonlinear Optics and Solid-State Lasers** Jianquan Yao, Yuyue Wang, 2012-01-14 This

book covers the complete spectrum of nonlinear optics and all solid state lasers The book integrates theory calculations and practical design technology experimental schemes and applications With the expansion and further development of Laser technology the wavelength spectrum of Lasers had to be enlarged even to be tunable which requires the use of nonlinear optical and Laser tunable technology It systematically summarizes and integrates the analysis of international achievements within the last 20 years in this field It will be helpful for university teachers graduate students as well as engineers      *Solid State Lasers* Massimo Inguscio, Richard Wallenstein, 2012-12-06 This volume contains the lectures and seminars presented at the NATO Advanced Study Institute on Solid State Lasers New Developments and Applications the fifteenth course of the Europhysics School of Quantum Electronics held under the supervision of the Quantum Electronics Division of the European Physical Society The Institute was held at Elba International Physics Center Marciana Marina Elba Island Tuscany Italy August 31 September 11 1992 The Europhysics School of Quantum Electronics was started in 1970 with the aim of providing instruction for young researchers and advanced students already engaged in the area of quantum electronics or wishing to switch to this area from a different background Presently the school is under the direction of Professors F T Arecchi and M Inguscio University of Florence and Prof H Walther University of Munich and has its headquarters at the National Institute of Optics INO Florence Italy Each time the directors choose a subject of particular interest alternating fundamental topics with technological ones and ask colleagues specifically competent in a given area to take the scientific responsibility for that course      **Tunable Solid State Lasers** P. Hammerling, A.B. Budgor, A. Pinto, 2013-04-17 In recent years there has been

renewed interest in the scientific and industrial communities in tunable solid state vibronic lasers Much of this has been

spurred by the user desirous of obtaining compact primary laser sources independent of nonlinear optical frequency shifts throughout the visible and near infra red spectral regions To further motivate and stimulate research and development in this area workshops sponsored by the Laser Division of the US Army Night Vision Electro Optics Laboratory NVEOL at Fort Belvoir Virginia were held during 13 April 1981 and 16-17 June 1983 at Keystone and NVEOL respectively The consensus of opinion of the participants at these workshops was that any successful program leading to the identification and development of vibronic tunable laser materials in the visible and IR must include coordinated activity between crystal growers theoretical and experimental investigators into the fundamental processes of vibronic lasing and laser device engineers Continued interaction between government industry and academia was encouraged in order to establish a unified approach to these areas and when necessary redefine and redirect programmatic activity The organization of this 1st Annual Conference on Tunable Solid State Lasers held at the La Jolla Institute 13-15 June 1984 was based around the latest results in tunable vibronic materials and laser development but structured in a manner consistent with the recommendations of the NVEOL workshops Solid-State Lasers Walter Koechner, Michael Bass, 2003-05-12 Koechner's well known bible on solid state laser engineering is now available in an accessible format at the graduate level Numerous exercises with hints for solution new text and updated material where needed make this text very accessible **Department of Defense**

**Hearings: Department of Defense Appropriations For 2001, Part 3, February 16, 2000 \***, 2004 Handbook of Laser Technology and Applications Chunlei Guo, 2021-06-24 This comprehensive handbook gives a fully updated guide to lasers and laser systems including the complete range of their technical applications The first volume outlines the fundamental components of lasers their properties and working principles The second volume gives exhaustive coverage of all major categories of lasers from solid state and semiconductor diode to fiber waveguide gas chemical and dye lasers The third volume covers modern applications in engineering and technology including all new and updated case studies spanning telecommunications and data storage to medicine optical measurement defense and security nanomaterials processing and characterization Advanced Solid State Lasers, 2001 **Laser Sources and Applications** A. Miller, 2020-12-23 Recent years have witnessed rapid advances in the development of solid state fiber semiconductor and parametric sources of coherent radiation which are opening up new opportunities for laser applications Laser Sources and Applications provides a tutorial introduction to the basic principles of these developments at a level suitable for postgraduate research students and others with a basic knowledge of lasers and nonlinear optics Encompassing both the physics and engineering aspects of the field the book covers the nature of nonlinear optical interactions solid state fiber and semiconductor lasers optical parametric

oscillators and ultrashort pulse generation and applications It also explores applications of current interest such as electromagnetically induced transparency atomic trapping and soliton optical communications **Solid-State Laser Engineering** Walter Koechner, 2013-11-11 This book is written from an industrial perspective and provides a detailed discussion of solid state lasers their characteristics design and construction Emphasis is placed on engineering and practical considerations The book is aimed mainly at the practicing scientist or engineer who is interested in the design or use of solid state lasers but the comprehensive treatment of the subject will make the work useful also to students of laser physics who seek to supplement their theoretical knowledge with engineering information In order to present the subject as clearly as possible phenomenological descriptions using models have been used rather than abstract mathematical descriptions This results in a simplified presentation The descriptions are enhanced by the inclusion of numerical and technical data tables and graphs This new edition has been updated and revised to take account of important new developments concepts and technologies that have emerged since the publication of the first and second editions **Laser Materials** Fuxi Gan, 1995-08-31 This book focuses mainly on the spectroscopy of laser materials physics of laser materials laser crystals and laser glasses The spectroscopic and laser properties of rare earth and transition metal ion doped solid state materials are systematically described based on modern quantum optics The aim of this book is to relate the laser and spectroscopic properties to the structure and chemical composition of materials It emphasises the nonlinear optical effects in laser materials which are widely used in high power laser systems The development of advanced solid state laser devices depends greatly on new laser materials Much progress has been made recently in the development of new laser materials and this is summarized in the book **Handbook of Lasers** Marvin J. Weber, 2019-04-30 Lasers continue to be an amazingly robust field of activity Anyone seeking a photon source is now confronted with an enormous number of possible lasers and laser wavelengths to choose from but no single comprehensive source to help them make that choice The Handbook of Lasers provides an authoritative compilation of lasers their properties and original references in a readily accessible form Organized by lasing media solids liquids and gases each section is subdivided into distinct laser types Each type carries a brief description followed by tables listing the lasing element or medium host lasing transition and wavelength operating properties primary literature citations and for broadband lasers reported tuning ranges The importance and value of the Handbook of Lasers cannot be overstated Serving as both an archive and as an indicator of emerging trends it reflects the state of knowledge and development in the field provides a rapid means of obtaining reference data and offers a pathway to the literature It contains data useful for comparison with predictions and for developing models of processes and may reveal fundamental inconsistencies or conflicts in the data
