Aluminum-Lithium Alloys N Eswara Prasad, Amol

Gokhale, R. J. H. Wanhill, 2013-09-20 Because lithium is the least dense elemental metal materials scientists and engineers have been working for decades to develop a commercially viable aluminum lithium Al Li alloy that would be even lighter and stiffer than other aluminum alloys The first two generations of Al Li alloys tended to suffer from several problems including poor ductility and fracture toughness unreliable properties fatigue and fracture resistance and unreliable corrosion resistance Now new third generation Al Li alloys with significantly reduced lithium content and other improvements are promising a revival for Al Li applications in modern aircraft and aerospace vehicles Over the last few years these newer Al Li alloys have attracted increasing global interest for widespread applications in the aerospace industry largely because of soaring fuel costs and the development of a new generation of civil and military aircraft This contributed book featuring many of the top researchers in the field is the first up to date international reference for Al Li material research alloy development structural design and aerospace systems engineering Provides a complete treatment of the new generation of low density AL Li alloys including microstructure mechanical behavior processing and applications Covers the history of earlier generation AL Li alloys their basic problems why they were never widely used and why the new third generation Al Li alloys could eventually replace not only traditional aluminum alloys but more expensive composite materials Contains two full chapters devoted to applications in the aircraft and aerospace fields where the lighter stronger Al Li alloys mean better performing more fuel efficient aircraft
