The Education Index ,1982 *Mathematical Subjects* Fiona Walls,2009-08-10

Teaching and learning mathematics is a political act in which children teachers parents and policy makers are made visible as subjects As they learn about mathematics children are also learning about themselves who they are who they might become We can choose to listen or not to what children have to say about learning mathematics Such choices constitute us in relations of power Mathematical know how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well being of nations With the globalisation of education in an increasingly market oriented world mathematics has received intensified attention in the first decade of the twenty first century with a shifting emphasis on utilitarian aspects of mathematics This is reflected in the reconceptualisation of mathematical competence as mathematical literacy loosely conceived as those ways of thinking reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active empowered and participatory citizens It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks raise standards enhance achievement close gaps and leave no child behind in mathematics education Industries have sprung up around the design administration and monitoring of standardised assessment to measure and compare children s mathematical achievement against identified benchmarks and each other

Introduction to Critical Reflection and Action for Teacher Researchers

Bernie Sullivan,Máirín Glenn,Mary Roche,Caitriona McDonagh,2016-04-28 Introduction to Critical Reflection and Action for Teacher Researchers provides crucial direction for educators looking to improve their teaching and maximise learning While many students can grasp the basic elements of researching their practice and can write about practitioner research some need guidance and assistance to reflect meaningfully on their teaching practice so as to articulate their educational values This book provides this guidance By exploring how to engage in an authentic practical and personalised framework the book encourages critical reflection and action on educational practice Moving through the process of reflecting on practice engaging in critical thinking and planning and taking action it helps the reader to subsequently generate educational theory from their own personal learning Examples from the authors experiences illustrate the issues raised in each section with Pause and Reflect activities guidelines for conducting a research project and annotated further reading available for every

chapter Introduction to Critical Reflection and Action for Teacher Researchers is based on the idea that reflection is in itself a deliberate action and something we must live it is key to understanding our practice and is a core component of action research This book is a valuable guide for teachers trainee teachers and researchers interested in reflecting on and enhancing their teaching practice **NSW Signpost Maths Teacher Resource** Alan Parker, Alan McSeveny, 2002-08-01
