Old and New Astronomy Richard Anthony Proctor, 1892 *Astronomy in the Iberian Peninsula* José Chabás, Bernard R. Goldstein, 2000 Abraham Zacut 1452-1515 of Salamanca was an outstanding intellectual figure in the Spanish Jewish community on the eve of the expulsion in 1492. His scientific work began in the 1470s; this publication is to be distinguished from *ha Hibbur ha gadol* (The Great Composition) that Zacut composed in Hebrew in 1478. Indeed, one of the findings in the course of research for this volume is that these are distinct works.

Bibliography Charts tables *Physical Foundation Of Economics, The: An Analytical Thermodynamic Theory* Jing Chen, 2005-09-23 All human activities, including mental activities, are governed by physical laws and are essentially thermodynamic processes. However, current economic theories are not established on these foundations. This pioneering book seeks to develop an analytical theory of economics on the foundation of thermodynamic laws. A unified understanding of economic and social phenomena is presented, an understanding that is much simpler than what mainstream economic theory has to offer. Its aim is to revolutionize thinking in economics and transform social sciences into an integral part of the physical and biological sciences.

Conquest Richard John Koscijew,2018-09-21 Early hominids made stone artifacts either by smashing rocks between a hammer and anvil known as the bipolar technique to produce usable pieces or through the regulating and directly controlled process as termed flaking in which stone chips were fractured away from a larger rock striking it with a hammer of stone or

other hard material Subsequently during the lingering existence of say ten thousand years the diversity in techniques for producing masonry artifacts including pecking grinding sawing and boring became additionally familiar The best rocks for flaking tended to be hard fine grained or amorphous having no crystal structure rocks including lava obsidian ignimbrites flint chert quartz silicified limestone quartzite and indurated shale Ground stone tools could be made on a wider range of raw material types including coarser grained rock such as granite

The History and Practice of Ancient Astronomy James Evans,1998-10-01 The History and Practice of Ancient Astronomy combines new scholarship with hands on science to bring readers into direct contact with the work of ancient astronomers While tracing ideas from ancient Babylon to sixteenth century Europe the book places its greatest emphasis on the Greek period when astronomers developed the geometric and philosophical ideas that have determined the subsequent character of Western astronomy The author approaches this history through the concrete details of ancient astronomical practice Carefully organized and generously illustrated the book can teach readers how to do real astronomy using the methods of ancient astronomers For example readers will learn to predict the next retrograde motion of Jupiter using either the arithmetical methods of the Babylonians or the geometric methods of Ptolemy They will learn how to use an astrolabe and how to design sundials using Greek and Roman techniques The book also contains supplementary exercises and patterns for making some working astronomical instruments including an astrolabe and an equatorium More than a presentation of astronomical methods the book provides a critical look at the evidence used to reconstruct ancient astronomy It includes extensive excerpts from ancient texts meticulous documentation and lively discussions of the role of astronomy in the various cultures Accessible to a wide audience this book will appeal to anyone interested in how our understanding of our place in the universe has changed and developed from ancient times through the Renaissance
