

The New Math Made Simple

**A complete course for self-study and review
for students and their parents**

Beginning with the key idea of the set, this book takes you through the first eight years of mathematics as it is taught today. Many of its topics are familiar—addition and subtraction, area and volume, percentages, equations—but they are presented here as part of the “new mathematics”. With emphasis on the mathematical thinking that underlies each process, the student is shown how to examine and work through each concept in order to understand why it is so, instead of just being told to memorize a formula or rule.

Whether you are a student exploring these principles for the first time or an adult who has been “using” them for years, you’ll see mathematics completely.
