**New Forces at Work** Steven W. Popper, Caroline S. Wagner, Eric Victor Larson, 1998 As part of the effort to produce the fourth National Critical Technologies Report the Office of Science and Technology Policy in the Executive Office of the President asked a research team from RAND s Critical Technologies Institute now named Science and Technology Policy Institute to engage business and industry leaders explicitly in a discussion of the issue of critical technologies by gathering private sector views on what technologies are appropriate to consider under this rubric and why The primary substantive input was elicited through extended detailed interviews conducted individually usually with one firm s senior executive per session on site in most cases The report presents and analyzes interviewees responses to what technologies they consider to

be critical to their firm or industry explores the question of what critical technology means reports interviewees assessments of the status of U S efforts and performance in the areas of technology they deemed critical considers the respective roles of industry universities and government in contributing to and sustaining the U S technology base suggests a process whereby the dialogue between government and industry on the public policy issues relating to technology might be made more integral and informative to the activities of both The responses of many of the interviewees emphasized the aspect of technology as process over technology as product In line with this vision the authors propose a critical technologies review process that would enable wider more meaningful and ongoing communication among industry government and universities on technology issues *American Book Publishing Record Cumulative 1998* R R Bowker Publishing,1999-03
