New Monomers And Polymers Polymer Science And Technology:

New Monomers and Polymers Charles U. Pittman, Bill M. Culbertson, 2012-12-06 Interest in preparing new polymers peaked about 1966 Since that time industrial and government support for the synthesis and study of new polymers has steadily declined Gone are the good days when government funds supported a great push to attain ultimate thermal stability for organic polymeric materials Gone are the good days when many chemical companies encouraged by the obvious potential for rewards had great interest and provided support for preparing new polymers We now often hear managers say we have enough polymers or all we need to do is find additional and better ways to use existing polymers The latter often includes the statement we can get the new materials that are wanted from polymer alloys or blends Interest in preparing new monomers has also waned even though it is well recognized that monomers with special functionality are greatly needed to fine tune existing polymers for specific tasks Shrinkage of interest in new monomer and polymer research has not come about solely as a result of the obvious maturity of the polymers industry Since uses for polymers continue to grow and there is still room for good concepts to study lack of market growth and fields of study have probably not significantly contributed to that shrinkage

Catalysts for the Controlled Polymerization of Conjugated Dienes Marc Visseaux,2020-12-10 Since the beginning of the 1960s the coordinative polymerization of conjugated dienes has continuously improved Today chemists know how to polymerize conjugated dienes stereospecifically and in a controlled fashion both petro sourced nowadays also bio sourced and those of natural origin The industry has greatly improved the performances of the catalytic systems covering a wide range of elements including metals from groups 4 6 and 8 10 and rare earths with the aim of optimizing the preparation of synthetic polymers for a large range of industrial applications Nowadays there is a better understanding of the polymerization mechanism involving allyl active species thanks in particular to the support of more efficient calculation methods In addition statistical copolymerization of 1 3 dienes with olefin or styrene comonomers and innovative approaches to coordinative chain transfer polymerization allow the production of copolymers with controlled topology while a last challenge is about to be solved with the preparation of stereoregular polydienes that are also end functionalized This issue brings together several important aspects of this chemistry that remain at the forefront of both academic and industrial research
