Recent Advances in Diagnostic Neuroradiology Ph. Demaerel, 2000-09-14 Diagnostic neuroradiology is undergoing such rapid change that standard texts are quickly becoming outdated in important respects. *Recent Advances in Diagnostic Neuroradiology* is designed to complement the general textbooks of neuroradiology by documenting and discussing the progress that has been achieved. Following six introductory chapters 26 important topics in brain and spinal imaging are discussed in detail with appropriate illustrations and a review of the most recent literature. Each of these topics has specifically been chosen in order to summarize recent developments and to document the state of the art in the field. This book, written by acknowledged experts in the field, will be of relevance and importance to all with an interest in neuroradiology.

Presents an up to date detailed reference on veterinary neurosurgery techniques covering skills ranging

from basic to advanced Provides guidance on why when and how to perform neurosurgical procedures Includes information on diagnostic evaluation surgical planning and instrumentation as well as step by step descriptions of specific procedures Copublished with the American College of Veterinary Surgeons Foundation and American College of Veterinary Internal Medicine Offers video clips on a companion website *Radiocontrast Agents* M. Sovak, 2012-12-06 Contrast media are drugs by default Had there been no default there would be no need for a related pharmacology and thus no need for this book Radiographic contrast media CM are substances whose primary purpose is to enhance diagnostic information of medical imaging systems The position of CM in pharmacology is unique First there is the unusual requirement of biological inertness An ideal CM should be completely biologically inert i.e. stable not pharmacologically active and efficiently and innocuously excretable Because they fail to meet these requirements CM must be considered drugs The second unusual aspect of CM is that they are used in large quantities their annual production being measured in tens of tons It is not in spite of but because of the increased use of new radiographic systems computed tomography digital radiography etc that consumption is on the rise And it is not likely that the other emerging imaging modalities NMR ultrasonography etc will displace radiographic CM soon it is quite probable that these remarkable compounds will continue to play an active role in diagnostic imaging in the foreseeable future New Technologies in Spine Surgery, An Issue of Neurosurgery Clinics of North America E-Book Michael Y. Wang, Nathaniel P. Brooks, 2019-11-28 This issue of Neurosurgery Clinics guest edited by Dr Nathaniel P Brooks and Dr Michael Y Wang is devoted to New Technologies in Spine Surgery Articles in this issue include Endoscopic Lumbar Discectomy Endoscopic Cervical Foraminotomy Endoscopic Lumbar Interbody Fusion Endoscopic Lumbar Decompression Lateral Lumbar Interbody Fusion Retropleural Thoracic Approach Novel Intervertebral Technologies Surface Technologies for Fusion Cell derived Stem Cell Technologies for Fusion Disk Replacement Enhanced Recovery in Spine Surgery Perioperative pain management Imaging Technologies Robotic Instrumentation Placement Minimally Invasive Deformity Advances Tissue Engineering Regenerative Treatments Minimally Invasive Tumor Ablation and more **Imaging Techniques in Orthopaedics** Charles S.B. Galasko, Ian Isherwood, 2012-12-06 Recent years have witnessed major developments in diagnostic imaging methods The facilities for these new methods are sometimes expensive and not always accessible yet they continue to improve and to change It is essential that those concerned with orthopaedic imaging should appreciate not only recent developments but also the changes likely to occur during the next few years It is also important that the indications contraindications uses and complications for each individual imaging technique should be understood This book is an attempt to provide such information for orthopaedic surgeons diagnostic radiologists and other clinicians particularly those in training or those who are involved in management of patients with disorders of the musculoskeletal system In the first part of the book the different imaging techniques are discussed with emphasis on advantages and disadvantages indications and contraindications In the second part authors have been asked to discuss ways in which specific groups of

disorders might be investigated It is hoped that the reader will obtain from this section a balanced view of the different diagnostic imaging methods the indications for their use and the sequence in which they might be carried out The Editors are grateful to aU authors for the time and work they have put into their individual chapters They are also grateful to the publishers in particular Michael Jackson for help given in the preparation of this book Manchester C S B Galasko I
