

ADME and Toxicology

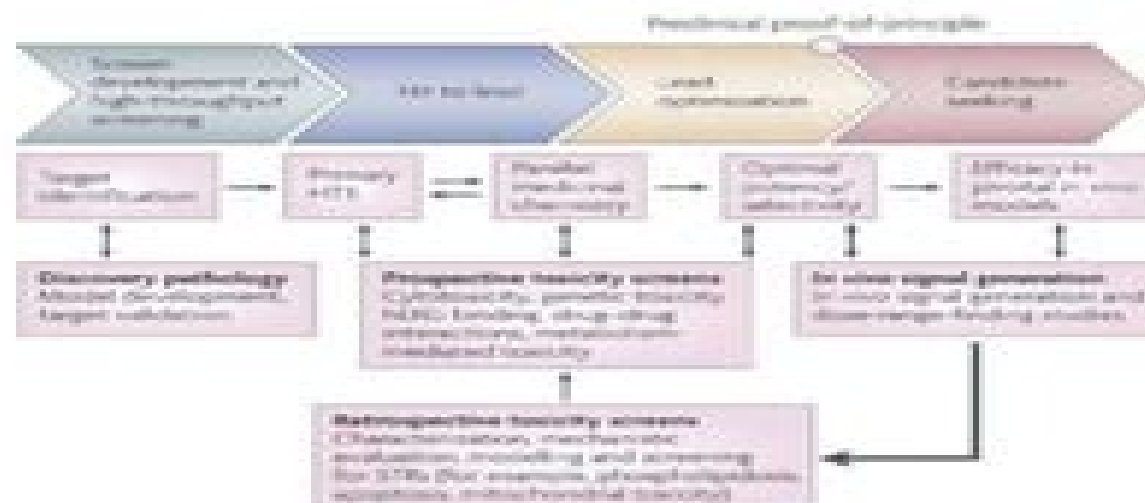

ADME and Toxicology testing has become one of the most important research activities related to new drug discovery. Ensuring that the drugs make it to the market quicker with higher hit rates thereby saving cost, requires prior indication of human toxicity as well as pharmacokinetics and therefore is of utmost importance. Since the pharmaceutical and biotechnology companies are utilizing the newer technologies, ADME and toxicology screening at early stages of drug discovery and development process has become even more imperative.

Our ADME & Toxicology 2013 is an international event being hosted in New Delhi, India. This event will focus on the vital role of ADME and Toxicology in identification and design of a successful drug candidate. Our array of Keynote Speakers will give presentations on all areas of ADME and Toxicology backed up by a panel of expert speakers speaking on highly relevant and "hot" topics such as Pharmacogenomics and Drug Safety, In-silico PK/PD, Toxicity and Genotoxicity Modeling, New Therapeutic Targets, Metabolomics and ADME Optimization for Drug Design/Discovery.

Also, co-located with our ADME & Toxicology 2013 conference will be our Nanomedicine meeting. Registered delegates will have unrestricted access to both meetings ensuring a comprehensive learning and sharing experience as well as being financially beneficial for attendees.

The application of discovery toxicology towards the design of safer pharmaceutical lead candidates

Toxicity is a leading cause of attrition at all stages of the drug development process. The majority of safety-related attrition occurs preclinically, suggesting that approaches to identify 'predictable' preclinical safety liabilities earlier in the drug development process could lead to the design and/or selection of better drug candidates that have increased probabilities of becoming marketed drugs. In this Review, we discuss how the early application of preclinical safety assessment—both new molecular technologies as well as more established approaches such as standard repeat-dose rodent toxicology studies—can identify predictable safety issues earlier in the testing paradigm. The earlier identification of dose-limiting toxicities will provide chemists and toxicologists the opportunity to characterize the dose-limiting toxicities, determine structure-toxicity relationships and minimize or circumvent adverse safety liabilities.

Coan, John J.B. Allen, 2007-04-19 Emotion research has become a mature branch of psychology with its own standardized measures induction procedures data analysis challenges and sub disciplines During the last decade a number of books addressing major questions in the study of emotion have been published in response to a rapidly increasing demand that has been fueled by an increasing number of psychologists whose research either focus on or involve the study of emotion Very few of these books however have presented an explicit discussion of the tools for conducting research despite the facts that the study of emotion frequently requires highly specialized procedures instruments and coding strategies and that the field has reached a place where a large number of excellent elicitation procedures and assessment instruments have been developed and validated Emotion Elicitation and Assessment corrects this oversight in the literature by organizing and detailing all the major approaches and instruments for the study of emotion It is the most complete reference for methods and resources in the field and will serve as a pragmatic resource for emotion researchers by providing easy access to a host of scales stimuli coding systems assessment tools and innovative methodologies This handbook will help to advance research in emotion by encouraging researchers to take greater advantage of standard and well researched approaches which will increase both the productivity in the field and the speed and accuracy with which research can be communicated Handbook of Laboratory Animal Science, Volume I Jann Hau, Steven J.
