This work provides a comprehensive introduction to paint technology supported by the relevant aspects of chemistry and physics. It covers the basic science and is devoted to paint composition, formulation and drying mechanisms, paint ingredients such as solvents, pigments and additives and the different paint groups by chemical type. Throughout the book the authors emphasize the factors which govern the choice of a particular paint for a particular job. This new edition has been thoroughly revised to modernize and clarify the text. Areas of new development have been added including environmental impacts, safety issues and modern paint making techniques. Nomenclature and units have also been updated and a glossary of technical terms added. This book should be of interest as a course text for paint technology students and technical staff concerned with the paint industry.

Boxall, Joseph Anthony Von Fraunhofer, 1981 *Paints, Pigments, Varnishes and Enamels Technology Handbook (with Process & Formulations) 2nd Revised Edition* NIIR Board of Consultants and Engineers, 2016-10-01
The use of paints, varnishes and enamels for decoration is nearly as old as human culture itself. These are widely used in homes as well as in industry because painted surfaces are attractive and easy to keep clean. Paint is generally made up of a pigment. It is a chemical material which alters the color of reflected or transmitted light due to wavelength selective absorption. Varnish is a transparent hard protective finish or film primarily used in wood finishing but also for other materials. Varnish is traditionally a combination of a drying oil, a resin and a thinner or solvent. The technology of paints, varnishes and enamels is changing rapidly and becoming more complex each day. The paint industry is an important segment of the chemical industry. Enamel paint is paint that air dries to a hard, usually glossy finish used for coating surfaces that are outdoors or otherwise subject to wear or variations in temperature. The Indian paint industry has seen a gradual shift in the preferences of people from the traditional whitewash to higher quality paints like emulsions and enamel paints with improvement in lifestyle. India is the second largest consumer of paint in Asia. Over the past few years the Indian paint market has substantially grown and caught the attention of many major players. The market for paints in India is expected to grow at 1.5 times to 2 times GDP growth rate in the coming years. In terms of volumes, pigments demand is expected to reach 4.4 million tonnes. Due to increased Government funding for infrastructure, demand for paints both in industrial and decorative segment is set to rise, thereby rendering Indian paint industry to be poised for further growth. This handbook is designed for use by everyone engaged in the paints, pigments, varnishes and enamels industry. It provides all the information of the various formulae and processes of paints, pigments, varnishes and enamels. The major content of the book are: paint testing, color in paint, maintenance, paints emulsion, paints exterior or interior, paints exterior or interior, multicolor paints exterior, swimming pool paints and enamels interior, ceiling paints, metal paints, marine paints, enamel paints interior, fire retardant paints interior.
