Sampling and Modeling Biological Populations and Population Dynamics G. P. Patil, E. C. Pielou, W. E. Waters, 1976 **Three Examples of Modeling and Sampling Biological Populations** Vallerie Ims Cullinan, 1984

Sampling and modeling biological populations and population dynamics : based on the proceedings of the International Symposium on Statistical Ecology, New Haven, Conn., Aug, 1969 Ganapati P. Patil, 1971 Modelling Biological Populations in Space and Time Eric Renshaw, 1993-08-26 This volume develops a unifying approach to population studies emphasising the interplay between modelling and experimentation Throughout mathematicians and biologists are provided with a framework within which population dynamics can be fully explored and understood Aspects of population dynamics covered include birth death and logistic processes competition and predator prey relationships chaos reaction time delays fluctuating environments spatial systems velocities of spread epidemics and spatial branching structures Both deterministic and stochastic models are considered Whilst the more theoretically orientated sections will appeal to mathematical biologists the material is presented so that readers with little mathematical expertise can bypass these without losing the main flow of the text Population Genetics Matthew B. Hamilton, 2011-09-23 This book aims to make population genetics approachable logical and easily understood To achieve these goals the book s design emphasizes well explained introductions to key principles and predictions These are augmented with case studies as well as illustrations along with introductions to classical hypotheses and debates Pedagogical features in the text include Interact boxes that guide readers step by step through computer simulations using public domain software Math boxes that fully explain mathematical derivations Methods boxes that give insight into the use of actual genetic data Numerous Problem boxes are integrated into the text to reinforce concepts as they are encountered Dedicated website at www.wiley.com/go/hamiltongenetics This text also offers a highly accessible introduction to coalescent theory the major conceptual advance in population genetics of the last two decades

Statistical Ecology G. P. Patil, E. C. Pielou, W. E. Waters, 1971 **Modeling Demographic Processes in Marked Populations** David L. Thomson, Evan G. Cooch, Michael J. Conroy, 2008-12-11 Here biologists and statisticians come together in an interdisciplinary synthesis with the aim of developing new methods to overcome the most significant challenges and constraints faced by quantitative biologists seeking to model demographic rates Sampling Methods for Multiresource Forest Inventory Hans T. Schreuder, Timothy G. Gregoire, Geoffrey B. Wood, 1993-04-16 Designed to aid readers in gathering the most reliable quantitative information on forests for the least cost Thoroughly explains the interrelationships between sampling strategies discusses forestry techniques of efficient tactics examines new developments in statistics having immediate applications in forestry and describes related developments that should have relevance in the future Includes practical methods for dealing with forest data such as tree number height diameter and marketable wood Also contains problem sets Spatiotemporal Models of Population and Community Dynamics T. Czaran, 1998 This book presents a

comprehensive typology and a comprehensible description of spatiotemporal models used in population dynamics The main types included are reaction diffusion systems patch models metapopulation approaches host parasitoid models cellular automata interacting particle systems tessellations and distance models The models are introduced through examples and with informative verbal explanations to help understanding Some of the cellular automata examples are models not yet published elsewhere Possible extensions of certain model types are suggested Capture-recapture and Removal Methods for Sampling Closed Populations Gary C. White,1982 Quantitative Plant Ecology Peter Greig-Smith,1983-01-01

Analysis and Management of Animal Populations Byron K. Williams,James D. Nichols,Michael J. Conroy,2002-05-16 Analysis and Management of Animal Populations deals with the processes involved in making informed decisions about the management of animal populations It covers the modeling of population responses to management actions the estimation of quantities needed in the modeling effort and the application of these estimates and models to the development of sound management decisions The book synthesizes and integrates in a single volume the methods associated with these themes as they apply to ecological assessment and conservation of animal populations Integrates population modeling parameter estimation and decision theoretic approaches to management in a single cohesive framework Provides authoritative state of the art descriptions of quantitative approaches to modeling estimation and decision making Emphasizes the role of mathematical modeling in the conduct of science and management Utilizes a unifying biological context consistent mathematical notation and numerous biological examples **Introduction to Ecological Sampling** Bryan F.J. Manly,Jorge A. Navarro Alberto,2014-10-20 An Easy to Understand Treatment of Ecological Sampling Methods and Data Analysis Including only the necessary mathematical derivations Introduction to Ecological Sampling shows how to use sampling procedures for ecological and environmental studies It incorporates both traditional sampling methods and recent developments in environmental and ecological sampling methods After an introduction the book presents standard sampling methods and analyses Subsequent chapters delve into specialized topics written by well known researchers These chapters cover adaptive sampling methods line transect sampling removal and change in ratio methods plotless sampling mark recapture sampling of closed and open populations occupancy models sampling designs for environmental modeling and trend analysis The book explains the methods as simply as possible keeping equations and their derivations to a minimum It provides references to important more advanced sampling methods and analyses It also directs readers to computer programs that can be used to perform the analyses Accessible to biologists the text only assumes a basic knowledge of statistical methods It is suitable for an introductory course on methods for collecting and analyzing ecological and environmental data **Design and Analysis of Long-term Ecological Monitoring Studies** Robert A. Gitzen,2012-06-07 Comprehensive and multidisciplinary coverage of fundamental and advanced statistical tools and issues relevant to long term ecological monitoring Advances in Combinatorial Methods and Applications to Probability and Statistics N

Balakrishnan,1997-05-01 Sri Gopal Mohanty has made pioneering contributions to lattice path counting and its applications to probability and statistics This is clearly evident from his lifetime publications list and the numerous citations his publications have received over the past three decades My association with him began in 1982 when I came to McMaster University Since then I have been associated with him on many different issues at professional as well as cultural levels I have benefited greatly from him on both these grounds I have enjoyed very much being his colleague in the statistics group here at McMaster University and also as his friend While I admire him for his honesty sincerity and dedication I appreciate very much his kindness modesty and broad mindedness Aside from our common interest in mathematics and statistics we both have great love for Indian classical music and dance We have spent numerous many different subjects associated with the Indian music and hours discussing dance I still remember fondly the long drive to Amherst Massachusetts I had a few years ago with him and his wife Shantimayee and all the hearty discussions we had during that journey Combinatorics and applications of combinatorial methods in probability and statistics has become a very active and fertile area of research in the recent past Methods For Monitoring Tiger And Prey Populations K. Ullas Karanth,James D. Nichols,2017-10-26 This book addresses issues of monitoring populations of tigers ungulate prey species and habitat occupancy with relevance to similar assessments of large mammal species and general biodiversity It covers issues of rigorous sampling modeling estimation and adaptive management of animal populations using cutting edge tools such as camera traps genetic identification and Geographic Information Systems GIS applied under the modern statistical approach of Bayesian and likelihood based inference Of special focus here are animal survey data derived for use under spatial capture recapture occupancy distance sampling mixture modeling and connectivity analyses Because tigers are an icons of global conservation in last five decades enormous amounts of commitment and resources have been invested by tiger range countries and the conservation community for saving wild tigers However status of the big cat remains precarious Rigorous monitoring of surviving wild tiger populations continues to be essential for both understanding and recovering wild tigers However many tiger monitoring programs lack the necessary rigor to generate the reliable results While the deployment of technologies analyses computing power and human resource investments in tiger monitoring have greatly progressed in the last couple of decades a full comprehension of their correct deployment has not kept pace in practice In this volume Dr Ullas Karanth and Dr James Nichols world leaders in tiger biology and quantitative ecology respectively address this key challenge The have collaborated with an extraordinary array of 30 scientists with expertise in a range of necessary disciplines biology and ecology of tigers prey and habitats advanced statistical theory and practice computation and programming practical field sampling methods that employ technologies as varied as camera traps genetic analyses and geographic information systems The book is a tour de force of cutting edge methodologies for assessing not just tigers but also other predators and their prey The 14 chapters here are lucidly presented in a coherent sequence to provide tiger specific answers to fundamental

questions in animal population assessment why monitor what to monitor and how to monitor While highlighting robust methods the authors also clearly point out those that are in use but unreliable The managerial dimension of tiger conservation described here the task of matching monitoring objectives with skills and resources to integrate tiger conservation under an adaptive framework also renders this volume useful to wildlife scientists as well as conservationists

Hierarchical Modeling and Inference in Ecology J. Andrew Royle, Robert M. Dorazio, 2008-10-15 A guide to data collection modeling and inference strategies for biological survey data using Bayesian and classical statistical methods This book describes a general and flexible framework for modeling and inference in ecological systems based on hierarchical models with a strict focus on the use of probability models and parametric inference Hierarchical models represent a paradigm shift in the application of statistics to ecological inference problems because they combine explicit models of ecological system structure or dynamics with models of how ecological systems are observed The principles of hierarchical modeling are developed and applied to problems in population metapopulation community and metacommunity systems The book provides the first synthetic treatment of many recent methodological advances in ecological modeling and unifies disparate methods and procedures The authors apply principles of hierarchical modeling to ecological problems including occurrence or occupancy models for estimating species distribution abundance models based on many sampling protocols including distance sampling capture recapture models with individual effects spatial capture recapture models based on camera trapping and related methods population and metapopulation dynamic models models of biodiversity community structure and dynamics Wide variety of examples involving many taxa birds amphibians mammals insects plants Development of classical likelihood based procedures for inference as well as Bayesian methods of analysis Detailed explanations describing the implementation of hierarchical models using freely available software such as R and WinBUGS Computing support in technical appendices in an online companion web site [Integrated Population Biology and Modeling Part B](#), 2019-02-05 Integrated Population Biology and Modeling Part B Volume 40 offers very delicately complex and precise realities of quantifying modern and traditional methods of understanding populations and population dynamics with this updated release focusing on Prey predator animal models Back projections Evolutionary Biology computations Population biology of collective behavior and bio patchiness Collective behavior Population biology through data science Mathematical modeling of multi species mutualism new insights remaining challenges and applications to ecology Population Dynamics of Manipur Stochastic Processes and Population Dynamics Models The Mechanisms for Extinction Persistence and Resonance Theories of Stationary Populations and association with life lived and life left and more Studies human and animal models that are studied both separately and throughout chapters Presents a comprehensive and timely update on integrated population biology **Handbook of Environmental and Ecological Statistics** Alan E. Gelfand, Montserrat Fuentes, Jennifer A. Hoeting, Richard Lyttleton Smith, 2019-01-15 This handbook focuses on the enormous literature applying

statistical methodology and modelling to environmental and ecological processes The 21st century statistics community has become increasingly interdisciplinary bringing a large collection of modern tools to all areas of application in environmental processes In addition the environmental community has substantially increased its scope of data collection including observational data satellite derived data and computer model output The resultant impact in this latter community has been substantial no longer are simple regression and analysis of variance methods adequate The contribution of this handbook is to assemble a state of the art view of this interface Features An internationally regarded editorial team A distinguished collection of contributors A thoroughly contemporary treatment of a substantial interdisciplinary interface Written to engage both statisticians as well as quantitative environmental researchers 34 chapters covering methodology ecological processes environmental exposure and statistical methods in climate science *Marine Mammal Survey and Assessment Methods* J.L Laake,D.G.
