Marchetti, 2006-10-19 When we talk about forests we talk about 30% of our planet's land surface area In 2000 there was an estimated 3 870 10 ha of forest worldwide of which 1 5% is in forest plantations and 95% in natural forests FAO 2003 Forests are not only a source for timber they also generate significant nonwood goods and services mitigate climate change conserve biological diversity provide protection from natural hazards and not least provide recreational areas for an increasingly urbanized world population The availability of timber and nonwood goods and services is waning as deforestation and degradation of tropical forests continue While forest area has stabilized or is slightly increasing in the boreal and temperate regions the annual loss of forest area in the tropics and subtropics is decreasing Between 1990 and 2000 the annual rate of deforestation was estimated to be 14 6 10 ha approximately 0 38% and took place mainly in tropical and subtropical forests FAO 2003 The net annual rate of change is about 9 4 10 ha 0 2% Maintaining and enhancing forest areas and the vitality of forest ecosystems is a widely accepted political goal which is often opposed by conflicting demands of various stakeholders **Forest Service Resource Inventories** , 1992 **Integrated Tools for Natural Resources Inventories**

mathematics in the book at a fairly non technical level and therefore although we deal with many issues that include highly sophisticated methodology we try to present first and foremost the ideas behind them For foresters who need more details references are given to more advanced scientific papers and books in the fields of statistics and biometrics Forest inventory books deal mostly with sampling and measurement issues as found here in section I but since forest inventories in many countries involve much more than this we have also included material on forestry applications Most applications nowadays involve remote sensing technology of some sort so that section II deals mostly with the use of remote sensing material for this purpose Section III deals with national inventories carried out in different parts of world and section IV is an attempt to outline some future possibilities of forest inventory methodologies The editors Annika Kangas Professor of Forest

Advances in Forest Inventory for Sustainable Forest Management and Biodiversity Monitoring

Piermaria Corona,Michael Köhl,Marco Marchetti,2013-04-17 Forests represent a remnant wilderness of high recreational value in the densely populated industrial societies a threatened natural resource in some regions of the world and a renewable reservoir of essential raw materials for the wood processing industry In June 1992 the United Nations Conference on the Environment and Development UNCED in Rio de Janeiro initiated a world wide process of negotiation with the aim of ensuring sustainable management conservation and development of forest resources Although there seems to be unanimous support for sustainable development from all quarters there is no generally accepted set of indicators which allows comparisons to be made between a given situation and a desirable one In a recent summary paper prepared by the FAO Forestry and Planning Division Ljungman et al 1999 find that forest resources continue to diminish while being called upon to produce a greater range of goods and services and that calls for sustainable forest management will simply go unheeded if the legal policy and administrative environment do not effectively control undesirable practices Does the concept of sustainable forest management represent not much more than a magic formula for achieving consensus a vague idea which makes it difficult to match action to rhetoric The concept of sustainable forest management is likely to remain an imprecise one but we can contribute to avoiding management practices that are clearly unsustainable Resource Assessment in Forested Landscapes David D. Reed,Glenn D. Mroz,1997-10-13 This book covers forest mensuration the process of counting measuring and estimating the economic value of a stand of trees This process also involves measuring non timber landscape values such as soils wildlife habitat and hydrology , Resource Assessment of Non-wood Forest Products Jennifer Ley Gn Wong,Kirsti Thornber,Nell Baker,2001-01-01 This publication is intended as reference material for practitioners considering inventory of non wood forest product NWFP resources Through review and analysis of experience it provides an overview of biometric issues in the design of NWFP inventory in the following areas a description of the range of approaches used and developed to date and their biometric adequacy and a suggested method for selecting appropriate biometric methods for resource quantification in different situations and for different products *General Technical Report RMRS* ,1998 Forest Measurements Harold E. Burkhart,Thomas Eugene Avery,Bronson P. Bullock,2018-08-13 Harold Burkhart and Bronson Bullock have updated the quintessential introduction to forest measurements providing a new generation of forestry students at all levels with the concepts and methods they need for career success With attention to detail and clear precise language the authors present timber measurement techniques applicable to any tree inventory regardless of management objectives Assuming no more mathematical background than algebra and plane trigonometry the authors begin with basic statistical concepts to ensure that even introductory students benefit from the book s concise explanations Comprehensive coverage of sampling designs land measurements tree measurements forest inventory field methods and

growth projections assures utility for foresters throughout their education and beyond The new edition includes expanded discussions of information technology and geospatial information systems commonly employed in assessing forest resources Recognizing the needs of contemporary forest inventories and models a new chapter on assessing forest carbon builds on the foundations of traditional forest measurements sampling and modeling Abundant photographs and illustrations highlight and clarify important concepts while many numerical examples allow readers to become comfortable with the quantitative tools employed by foresters
