diverse and often historic research published in different languages in order to describe its varied landscapes and landforms. The Central Sahara region consists of Libya, Algeria, Mali, Niger, and Chad, countries that share similar landscape histories and common landscape traits including massifs, sand seas, paleowater features, and large depressions. Furthermore, human settlement of this region goes hand in hand with climate and environmental changes and landscape evolution during the Holocene and earlier; hence, Central Saharan landscapes and landforms provide valuable insights into landscape-human relationships over long timescales. The book offers a comprehensive yet accessible reference source drawing on both past and present interdisciplinary research and gathering the insights of authors from many different countries to explore a region that has largely been overlooked in available literature.
