permeability by upwelling flow independent of recharge from the overlying or immediately adjacent surface Hypogene karst has been identified and documented in many regions where it was previously overlooked or misinterpreted The book enriches the basis for generalization and categorization of hypogene karst and thus improves our ability to adequately model hypogene karstification and predict related porosity and permeability It is a book which benefits every researcher student and practitioner dealing with karst     Landforms of High Mountains Alexander Stahr, Ewald Langenscheidt, 2014-09-30 This image atlas and reference book is written in simple language that can be understood by a broad audience The work comprehensively explains the geomorphological forms of high mountains using many examples like glacial erosion forms and deposits such as moraines and gravel terraces which are illustrated with numerous photographs Landslide landscapes volcanoes weathering and erosion are other examples discussed These examples are from across the world including the Himalayas the Alps the Andes and the Southern Alps of New Zealand This work is useful for laymen who are interested in geosciences especially high mountain landforms as well as for students and teachers of earth sciences     *Australian National Bibliography*, 1993     Sagalassos V Marc Waelkens, Lieven Loots, 2000 In two volumes     **Landscapes and Landforms of Hungary** Dénes Lóczy, 2015-03-02 This volume is the first comprehensive description of the most spectacular landforms of Hungary It is a richly illustrated book which presents a collection of significant sites capturing the geodiversity of Hungarian landscapes The Landscapes and Landforms of Hungary discusses the effects of geomorphological features to the landscape such as volcanism weathering fluvial or aeolian erosion karst formation gravitational movements and others The importance of the conservation of geomorphological heritage is underlined as well as the importance of geomorphological heritage and conservation This book can be used for undergraduate and graduate courses in geomorphology physical geography hydrogeography and nature conservation It will be of benefit to environmental scientists geomorphologists conservationists among others     *Arid and Semi-Arid Geomorphology* Andrew S. The Central Sahara region consists of Libya, Algeria, Mali, Niger, and Chad, countries that share similar landscape histories and common landscape traits including massifs, sand seas, paleowater features, and large depressions. Furthermore, human settlement of this region goes hand in hand with climate and environmental changes and landscape evolution during the Holocene and earlier; hence, Central Saharan landscapes and landforms provide valuable insights into landscape-human relationships over long timescales. The book offers a comprehensive yet accessible reference source drawing on both past and present interdisciplinary research and gathering the insights of authors from many different countries to explore a region that has largely been overlooked in available literature.
