Stratigraphic reservoir characterization for petroleum geologists, geophysicists, and engineers Roger M. Slatt, 2006-11-03 Reservoir characterization as a discipline grew out of the recognition that more oil and gas could be extracted from reservoirs if the geology of the reservoir was understood Prior to that awakening reservoir development and production were the realm of the petroleum engineer In fact geologists of that time would have felt slighted if asked by corporate management to move from an exciting exploration assignment to a more mundane assignment working with an engineer to improve a reservoir's performance Slowly reservoir characterization came into its own as a quantitative multidisciplinary endeavor requiring a vast array of skills and knowledge sets Perhaps the biggest attractor to becoming a reservoir geologist was the advent of fast computing followed by visualization programs and theaters all of which allow young geoscientists to practice their computing skills in a highly technical work environment Also the discipline grew in parallel with the evolution of data integration and the advent of asset teams in the petroleum industry Finally reservoir characterization flourished with the quantum improvements that have occurred in geophysical acquisition and processing techniques and that allow geophysicists to image internal reservoir complexities *Lacustrine Sandstone Reservoirs and Hydrocarbon Systems* Olive W. Baganz, Yuval Bartov, Kevin M. Bohacs, Dag Nummedal, 2012-11-20 Many publications on lacustrine systems concentrate on reconstructing paleo environments deciphering paleoclimate or estimating hydrocarbon source potential This is the first memoir to give attention to describing the occurrence distribution and character of sandstones in various lake settings The memoir is divided into four sections beginning with a global overview and followed by two sections covering lacustrine systems in compressional and extensional regimes and concludes with a series of papers on modern lake regimes **Sandstone Reservoirs and Stratigraphic Concepts: Selected papers reprinted from AAPG**

bulletin and memoir 18 American Association of Petroleum Geologists, 1973 **Sandstone Reservoirs and Stratigraphic Concepts** American Association of Petroleum Geologists, 1973 **Sandstone Reservoirs and Stratigraphic Concepts** American Association of Petroleum Geologists, 1973 **Sandstone Reservoirs and Stratigraphic Concepts**, 1973 *Sandstone Reservoirs and Stratigraphic Concepts II* American Association of Petroleum Geologists, 1973 **Coastal Sedimentary Environments** R.A. Jr. Davis, 2012-12-06 Richard A Davis The zone where land and sea meet is composed of a variety of complex environments The coastal areas of the world contain a large percentage of

its population and are therefore of extreme economic importance Industrial residential and recreational developments as well as large urban complexes occupy much of the coastal margin of most highly developed countries Undoubtedly future expansion in many undeveloped maritime countries will also be concentrated on coastal areas Accompanying our occupation of coasts in this age of technology is a dependence on coastal environments for transportation food water defense and recreation In order to utilize the coastal zone to its capacity and yet not plunder its resources we must have extensive knowledge of the complex environments contained along the coasts The many environments within the coastal zone include bays estuaries deltas marshes dunes and beaches A tremendously broad range of conditions is represented by these environments Salinity may range from essentially fresh water in estuaries such as along the east coast of the United States to extreme hypersaline lagoons such as Laguna Madre in Texas Coastal environments may be in excess of a hundred meters deep fjords or may extend several meters above sea level in the form of dunes Some coastal environments are well protected and are not subjected to high physical energy except for occasional storms whereas beaches and tidal inlets are continuously modified by waves and currents
