Freshwater Shrimp and Prawns Deborah T. Hanfman, 1990 Advances in Marine Biology, 1990-12-05 This authoritative review will be valuable reference for marine biologists ecologists and taxonomists It is also an essential handbook for the penaeid fisheries biologist or aquaculturist and is a prerequisite for the rational exploitation and cultivation of penaeids Although penaeids are a large and diverse decapod group which have been exploited commercially in both fisheries and aquaculture for hundreds of years no comprehensive review of their biology has never been written The group's commercial importance has led to an unbalanced literature dominated by the fisheries and aquaculture aspects of the genus *Penaeus* often without an appreciation of their underlying biology This review adopts a multidisciplinary approach to give a comprehensive and up to date account of morphology taxonomy including larvae zoogeography physiology reproduction feeding growth behaviour and life histories Chapters discussing the parasites of and predation on penaeids are also included So much new material is presented that the book is more than just a review of the existing literature In synthesising the published information across this diverse family it puts the commercially important species and genera into a larger perspective pointing to deficiencies in our understanding and creating a framework for areas of future research

Mainstreaming Natural Capital and Ecosystem Services into Development Policy Pushpam Kumar, 2019-09-12 This book highlights the latest advances in the science and practice of using ecosystem services to inform decisions for economic development in the context of the developing countries The development of the ecosystem services paradigm has enhanced our understanding of natural capital as an indispensable form of capital asset along with produced and human capital This book addresses what could be the possible pathways to mainstream natural capital assets into development policies and what is currently known about the economic values of ecosystem services A series of innovative tools to help policy makers and planners account for natural capital and ecosystem services in sectoral and macroeconomic policies have been explored and their application at the national and regional scale has been demonstrated Several detailed case studies are presented in which the understanding of ecosystem services values has successfully informed decisions including examples from Chile South Africa Tanzania Trinidad and Tobago Vietnam and the Aral Sea in Central Asia These provide the critically important insights lessons learned and means and mechanisms for policy makers to incentivize protection and discourage degradation

of ecosystems and the services they provide Mainstreaming Natural Capital and Ecosystem Services into Development Policy is designed to help decision makers at all levels including governments businesses multilevel development banks and individuals to integrate ecosystems and their services into their decision making

Ecological Connectivity among Tropical Coastal Ecosystems Ivan Nagelkerken, 2009-09-23 Mangrove forests seagrass beds and coral reefs are circumtropical ecosystems that are highly productive and provide many important biological functions and economic services These ecosystems cover large surface areas in the shallow tropical coastal seascape but have suffered from serious human degradation especially in the last few decades Part of their diversity productivity and functioning seems to be based on their juxtaposition Especially in the last decade significant advances have been made on new insights into their ecological connectivity This authoritative book provides a first time comprehensive review of the major ecological interactions across tropical marine ecosystems that result from the mutual exchange of nutrients organic matter fish and crustaceans A group of leading authors from around the world reviews the patterns and underlying mechanisms of important biogeochemical and biological linkages among tropical coastal ecosystems in 15 chapters Included are chapters that review cutting edge tools to study and quantify these linkages the importance of such linkages for fisheries and how tropical ecosystems should be conserved and managed for sustainable use by future generations The book uses examples from all over the world and provides an up to date review of the latest published literature This book is a must read for professionals working on the conservation management and ecology of mangrove seagrass and coral reef ecosystems

Tropical Mangrove Ecosystems A. I. Robertson, D. M. Alongi, 2013-03-18 Published by the American Geophysical Union as part of the Coastal and Estuarine Studies Volume 41 Mangrove forests are a dominant feature of tropical coasts Like their terrestrial counterparts these forests are under threat worldwide through a variety of destructive human practices As is also the case with tropical terrestrial forests management decisions about mangrove ecosystems are currently being made often without adequate fundamental knowledge of the processes controlling natural ecosystem function
