Golub,1997-05 Edward Golub distinguished researcher and former professor of immunology shows that major advances in medicine are caused by changes in the way scientists describe disease Bleeding sweating and other treatments we consider barbaric were standard treatments for centuries because they conformed to a conception of disease shared by patients and doctors Scientific breakthroughs in the understanding of disease in the nineteenth century transformed treatment and the goals of medicine Golub argues that the ongoing revolution in molecular genetics has opened the door to

the biology of complexity again transforming our view of disease This thought provoking timely book reveals a crucial but overlooked role of science in medicine and offers a new vision for the goals of both science and medicine as we enter the twenty first century Science and Christianity: Close Partners or Mortal Enemies? Dave Armstrong, 2012-02-13 It s very fashionable nowadays to assert that Christianity and science are antithetical or that God has been ruled out of science or disproven particularly by Darwinian evolution or that science is based on reason and evidence whereas religion being faith based supposedly cares little or nothing for same or that one cannot consistently be a Christian and also a real scientist I shall contend that not only are science and Christianity completely compatible but that modern science would not have even gotten off the ground if it hadn t been for medieval scholastic Catholic thought I shall demonstrate that the foundations of modern science in the 16th century were overwhelmingly Christian and theistic The notion that science and religion are fundamentally incompatible is ludicrous and would obliterate science at its very roots Includes mini biographies of 293 scientists and a chart of 115 scientific fields of study founded or extraordinarily advanced by Christian or theistic scientists

therapy **Allies and Enemies** Anne Maczulak, 2010-07-08 Bacteria are invisible mysterious deadly self sufficient and absolutely essential for all life including yours No other living things combine their elegant simplicity with their incredibly complex role Bacteria keep us alive supply our food and regulate our biosphere We can't live a day without them and no chemical antibiotic or irradiation has ever successfully eradicated them They're our partners like it or not even though some of them will happily kill us Allies and Enemies tells the story of this amazing intimate partnership Authored by Anne Maczulak a microbiologist who's hunted and worked with an extraordinary array of bacteria this book offers a powerful new perspective on Earth's oldest creatures You'll discover how bacteria work how they evolve their surprising contributions and uses the roles they've played in human history and why you can't survive without them No form of life is more important and in Maczulak's hands none is more fascinating Outlasted outnumbered outsmarted They've been here four billion years and they even outnumber you in your own body How bacteria keep you alive and how to keep them from killing you Humans Defeat Germs But not for long The Invisible Universe The stunning hidden relationships between bacteria and the rest of nature Poisons and Poisonings Tony Hargreaves, 2020-08-28 It is London in the 1890s A young woman has just taken a dose of a tonic she's been given in the belief that it will improve her complexion About ten minutes pass and she starts to experience breathing difficulties Another minute and she collapses Mercifully death arrives but the poison has not yet finished for the process of rigor mortis has set in with unusual speed Her body is frozen into a rigid and contorted mass This is the horror of strychnine the nastiest of poisons Despite knowing all the dreadfulness of this poison Dr Thomas Neill Cream the Lambeth Poisoner used it to kill several prostitutes And who knows how many other victims experienced the horror of strychnine for it was by no means an uncommon poison Today there may well be more poisons available to the individual than ever before but there are also advances in medical examination and forensic analysis that increase the likelihood of the poisoner being caught This book will examine poisons both natural and man-made menaces and cases based on a particular poison as well as information about how forensic analysis is conducted Appealing to scientists and non-scientists alike this enthralling book will entertain and educate and bring the reader up to date with how important chemical analysis is in crime detection Smallpox, Syphilis and Salvation Sheryl Persson, 2010-04 Since ancient times the search for cures for the great scourges that have afflicted humankind has been an ongoing quest but it is only within the last 200 years that major breakthroughs have occurred and the development of modern medicine has accelerated The stories behind these miraculous cures are those of intense rivalries and jealousies bitter public humiliation unswerving dedication subterfuge and great personal struggles Often these medical advances have truly changed the world When Edward Jenner developed the concept of vaccination and with it the cure for smallpox he found a way to defeat a disease that had affected half a billion people more than all those affected by wars and other epidemics combined And while the Black Death still lingers in pockets around the world it no longer threatens to destroy entire civilisations as it once did SMALLPOX SYPHILIS AND SALVATION uncovers

the compelling stories of the men and women innovations and accidents that have led to diseases from polio to syphilis diphtheria to diabetes tetanus to leukaemia no longer being the death sentences they once were It also sounds a note of warning for some of these diseases are fighting back It is estimated that tuberculosis now claims one life every fifteen seconds while new superbugs are resistant to penicillin and other antibiotics Diseases may once again threaten to crush the world's population either in the form of biological warfare or simply because they want to survive as much as we do **A**
