Environmental Health Perspectives ,1995 Endocrine Disruptors and Carcinogenic Risk Assessment Lech Chyczewski,Jacek Niklinski,Eric Pluygers,2002 This work is devoted to the study of the endocrine related effects on human health with special reference to carcinogenesis and to the assessment of carcinogenic risk After providing basic information at the general cellular and molecular levels the contents focus on the paradigm of biologically based risk assessment as developed from physiologically based toxicokinetic models The analysis of this material is proposed as the novel parameters for developing biologically based models of carcinogenesis considered to be more relevant to risk assessment than traditional approaches *Proposed Guidelines for Carcinogen Risk Assessment* ,1996 **Scientific Review of the Proposed Risk Assessment Bulletin from the Office of Management and Budget** National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee to Review the OMB Risk Assessment Bulletin,2007-04-16 Risk assessments are often used by the federal government to estimate the risk the public may face from such things as exposure to a chemical or the potential failure of an engineered structure and they underlie many regulatory decisions Last January the White House Office of Management and Budget OMB issued a draft bulletin for all federal agencies which included a new definition of risk assessment and proposed standards aimed at improving federal risk assessments This National Research Council report written at the request of OMB evaluates the draft bulletin and supports its overall goals of improving the quality of risk assessments However the report concludes that the draft bulletin is fundamentally flawed from a scientific and technical standpoint and should be withdrawn Problems include an overly broad definition of risk assessment in conflict with long established concepts and practices and an overly narrow definition of adverse health effects one that considers only clinically apparent effects to be adverse ignoring other biological changes that could lead to health effects The report also criticizes the draft bulletin for focusing mainly on human health risk assessments while neglecting assessments of technology and engineered structures Low-dose Extrapolation of Cancer Risks Stephen S. Strategies to Protect the Health of Deployed U.S. Forces National Research Council,Commission on Life Sciences,Board on Environmental Studies and Toxicology,Lorenz Rhomberg,2000-04-01 Deployment of forces in hostile or unfamiliar environments is inherently risky The changing missions and increasing use of U S forces around the globe in operations other than battle call for greater attention to threats of non battle related health problems including infections pathogen and vector borne diseases exposure to toxicants and psychological and physical stress all of which must be avoided or treated differently from battle casualties The likelihood of exposure to chemical and biological weapons adds to the array of tactical threats against which protection is required The health consequences of physical and psychological stress by themselves or through interaction with other threats are also increasingly recognized In addition the military s responsibility in examining potential health and safety risks to its troops is increasing and the spectrum of health concerns is broadening

from acute illness and injury due to pathogens and accidents to possible influences of low level chemical exposures which can manifest themselves in reproductive health and chronic illnesses years later perhaps even after cessation of military service Strategies to Protect the Health of Deployed U S Forces develops an analytical framework for assessing risks which would encompass the risks of adverse health effects from battle injuries including those from chemical and biological warfare agents and non battle related health problems The presumed spectrum of deployment ranged from peacekeeping to full scale conflict
