**Aerodynamic Modeling of Aerospace Vehicles** Mehdi Ghoreyshi, Karl Jenkins, 2019-03-08 Currently the use of computational fluid dynamics CFD solutions is considered as the state of the art in the modeling of unsteady nonlinear flow physics and offers an early and improved understanding of air vehicle aerodynamics and stability and control characteristics This Special Issue covers recent computational efforts on simulation of aerospace vehicles including fighter aircraft rotorcraft propeller driven vehicles unmanned vehicle projectiles and air drop configurations The complex flow physics of

these configurations pose significant challenges in CFD modeling Some of these challenges include prediction of vortical flows and shock waves rapid maneuvering aircraft with fast moving control surfaces and interactions between propellers and wing fluid and structure boundary layer and shock waves Additional topic of interest in this Special Issue is the use of CFD tools in aircraft design and flight mechanics The problem with these applications is the computational cost involved particularly if this is viewed as a brute force calculation of vehicle s aerodynamics through its flight envelope To make progress in routinely using of CFD in aircraft design methods based on sampling model updating and system identification should be considered

*Planing of Watercraft* Herbert Wagner,1948 The present report deals with the processes accompanying the planing of a planing boat or a seaplane on water The study is largely based upon theoretical investigations mathematical problems and proofs are not discussed To analyze theoretically actual planing processes giving due consideration to all aspects of the problem is probably not possible The theories therefore treat various simple limiting cases which in their entirety give a picture of the planing processes and enable the interpretation of the experimental results The discussion is concerned with the stationary planing attitude the boat planes at a constant speed  $V$  on an originally smooth surface
