Disordered Systems Bikas K. Chakrabarti, Lucien-Gilles Benguigui, 1997 Under extreme conditions the mechanical or electrical properties of solids tend to be destabilized and failure or breakdown occurs In practice these instabilities in the solid often nucleate or spread from disorders in the structure of the solid This book investigates the modelling of such failure and breakdown processes The basic principles are illuminated with a large number of computer simulations and laboratory simulations or table top experiments Three particular case studies of failure are presented electrical failures like fuse and dielectric breakdown mechanical fracture and earthquakes as an example of dynamic failure MATERIAL SELECTION AND CORROSION - Volume I , 2010-12-15 These volumes are a component of Encyclopedia of Water Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The books are concerned with the development and selection of the best possible material for a particular engineering task and the determination of the most effective method of producing the materials and the component The complexity of modern processing and the need for efficient production and use of materials are discussed and illustrated by examples from current practice Properties are determined by structure which in turn depends on the
