**Life After Levels** Sam Hunter, 2016-08-09 This is the story of one school s successful journey to a life after levels Together the Headteacher and staff at one successful school took on the

challenge Where do we begin What is the best assessment system for our school and our children How do we make the most of assessment opportunities in the classroom How do we create an assessment policy from scratch and implement it in the school How do we evaluate it re shape it and talk about it to parents the wider school community and our colleagues in primary education Through exploring one school s story this text supports teachers and schools in a time of uncertainty confusion and choice to make the most of the new opportunity to assess children without the restrictions of levels The removal of Levels has given all professionals involved in education a unique opportunity to rediscover what we value in this key aspect of teaching and learning and it is an opportunity that we must grab with both hands I want this book to provide a time for reflection for teachers and school leaders to re adjust their thinking on assessment and to get excited about it Sam Hunter

**EBOOK: NUMERACY AND BEYOND** Martin Hughes, Charles Desforges, Christine Mitchell, Clive Carre, 2000-05-16

One of the fundamental problems in education is that of applying skills and knowledge which learners have gained in one context to problems they encounter in another This is particularly so in mathematics where the problems encountered by learners in applying mathematical knowledge are well documented Using and applying mathematics has been a central component of the National Curriculum in mathematics However the National Numeracy Strategy has adopted a new approach in which using and applying is integrated throughout the mathematics curriculum This book aims to help teachers develop their understanding and practice in this crucial area It is based on the findings of a major research study funded by the Nuffield Foundation in which a group of primary teachers worked closely with the research team to develop their thinking and practice The book provides a clear conceptual analysis of the problem of application together with extensive examples of ways in which teachers can address it in their classrooms at Key Stages 1 and 2 A novel feature of the book is that it includes first hand accounts of practice in Japanese classrooms and outlines what teachers in the UK and elsewhere may learn from Japanese methods

*Abstract Mathematical Cognition* Wolfgang Grodd, Philippe Chassy, 2016-08-09

Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts

**The Cambridge Primary Review Research Surveys** Robin Alexander, Christine Doddington, John Gray, Linda

Hargreaves, Ruth Kershner, 2012-08-06 The Cambridge Primary Review Research Surveys is the outcome of the Cambridge Primary Review England's biggest enquiry into primary education for over forty years. Fully independent of government it was launched in 2006 to investigate the condition and future of primary education at a time of change and uncertainty and after two decades of almost uninterrupted reform. Ranging over ten broad themes and drawing on a vast array of evidence the Review published thirty one interim reports including twenty eight surveys of published research provoking media headlines and public debate before presenting its final report and recommendations. This book brings together the twenty eight research surveys specially commissioned from sixty five leading academics in the areas under scrutiny and now revised and updated to create what is probably the most comprehensive overview and evaluation of research in primary education yet published. A particular feature is the prominence given to international and comparative perspectives. With an introduction from Robin Alexander the Review's director the book is divided into eight sections covering children's lives and voices, school, home and community, children's development, learning, diversity and needs, aims, values and contexts for primary education, the structure and content of primary education, outcomes, standards and assessment in primary education, teaching in primary schools, structures and processes, teaching in primary schools, training, development and workforce, reform, policy, frameworks, governance, funding, reform and quality assurance. The Cambridge Primary Review Research Surveys is an essential reference tool for professionals, researchers, students and policy makers working in the fields of early years, primary and secondary education.

*Becoming an Effective Teacher* Paul Stephens, Tim Crawley, 1994. Written for student and practising teachers this book takes into full account the shift in initial training from colleges to schools.

Teaching and Targets John Blanchard, 2013-01-11. Teachers, school managers and governors are now more publicly accountable than ever. They are expected to know how their school is performing and how to improve that performance. Target setting is a key tool in the drive to raise standards and has been implemented at every level of the education system. This book explores target setting from both the teacher's and pupil's viewpoint and investigates the role of assessment in successful teaching and learning. It shows that it is possible to develop a whole school target setting policy co-ordinating the use of targets for individual pupils, subject specific departments and teams and whole school improvement plans. In this way targets can be used positively for the benefit of pupils, teachers and managers. This book will be important reading for headteachers, senior management teams, assessment co-ordinators and subject leaders in schools and will also be of interest to governors and LEA advisors.
