*New Oxford Textbook of Psychiatry* John R. Geddes, Nancy C. Andreasen, Guy Goodwin, 2020 The third edition of the textbook presents psychiatry as a medical specialty The application of science has transformed much of medicine by providing an understanding of the mechanisms of pathology The genetic basis of psychiatry guarantees a future for explanation by neuroscience The book sets the scene for such development by explaining the key issues relating to the patient's perspective stigma the global challenge of mental disorder practical ethics and the foundations of psychiatry as phenomenology and a medical discipline It further explains current controversies around diagnosis psychopathology evidence and drug terminology The scientific basis of psychiatric aetiology and treatment provide simple introductions to the relevant disciplines that underpin our scientific understanding Individual disorders are covered in sections that follow the structure of the Diagnostic and Statistical Manual of Mental Disorders fifth edition DSM 5 Thus it follows a clinically led summary of how patients present with psychiatric disorder There is no denying the current utility of symptom based diagnoses and the consensus that created the current categories However the project of applying neuroscience to psychiatry has not failed as has sometimes been implied by criticism of DSM 5 For these reasons chapters have been included on genetics neurobiological targets and imaging in the sections of the book focused on specific disorders Sections have also been included on service provision and forensic psychiatry because these are critical to the context in which psychiatric disorder is managed

mental state defences In particular by undertaking an interdisciplinary analysis of the various factors that inform these defences the book concludes with several practical and robust reform proposals There are three objectives that underpin the suggested reform proposals First to ensure that an accused will be able to raise a defence of insanity for involuntary conduct arising from mental disorder even where he or she is aware of the nature and quality of such conduct Second to provide principled means by which to establish the criminal responsibility of an accused for conduct performed in a state of drug induced psychosis Third to ensure that criminal conduct arising from a state of impaired consciousness does not automatically result in the outright acquittal of an accused In articulating the competing demands that must be balanced in order to secure a principled approach to the reform of mental state defences the book will be of relevance to all common law countries
