New Perspectives In Nuclear Structure:

New Perspectives in Nuclear Structure International Spring Seminar on Nuclear Physics 1995, Ravello, Italy, Aldo Covello, 1996 This seminar focuses on recent achievements and new goals of nuclear structure in both experiment and theory Several topics at the forefront of current research in this field are covered by major experts The main themes are exotic nuclei the present role and perspectives of the shell model modes of excitation in deformed and superdeformed nuclei and nuclear astrophysics Publisher's website

New Perspectives in Nuclear Structure Aldo Covello, 1996 Proceedings of the Conference on Nuclear Structure in the Nineties Noah R. Johnson, 2016-06-03 Proceedings of the Conference on Nuclear Structure in the Nineties Proceedings of the Eleventh International Symposium Capture Gamma-Ray Spectroscopy and Related Topics Jan Kvasil, Pavel Cejnar, Milan Krtiřka, 2003 This volume is a collection of invited talks oral contributions and poster contributions devoted to advances in gamma ray spectroscopy of various capture reactions In agreement with the trend of previous meetings in the series the symposium paid special attention to theoretical and experimental studies of nuclear structure at low energies and to nuclear astrophysics Among the other topics covered are statistical properties of nuclei and other quantum many body systems fundamental physics nuclear data practical application of capture reactions and new techniques and facilities for capture gamma ray spectroscopy

Open Quantum Physics and Environmental Heat Conversion into Usable Energy Eliade Stefanescu, 2014-12-18 A Quantum system can be viewed as a larger closed system comprising of two components an open quantum system and its surrounding environment These two components interact with each other and in the realm of theoretical physics this interaction cannot be neglected This eBook explains mathematical and statistical concepts essential for describing a realistic quantum system by presenting recent contributions in this field The book commences by explaining of the basics of quantum mechanics statistical physics and physics of open quantum systems Detailed methods of deriving theoretical equations with explicit analytical coefficients with respect to open quantum systems are also explained The book concludes with the study of a quantum heat converter in the framework of an all microscopic theory involving fermions photons and phonons Readers of this book will gain a better understanding on the following topics Quantum mechanics including the Boson and Fermion states Fermi Dirac and Bose Einstein statistics spin statistics relation many body systems of Bosons and Fermions the Fermi Dirac integrals of the Fermion state densities and transport phenomena in semiconductors Dissipative dynamics and quantum systems such as friction diffusion friction diffusion relation mobility occupation probability dynamics damping spectral width correlation and autocorrelation memory stability bifurcation self organization and chaos Lindblad's theory of open quantum systems through the work of Alicki and Lendi Quantum tunneling as an interaction with a system Optical bistability including the fundamental contributions of Carmichael McCall and Bonifacio Master equations based on the microscopic theory of Ford Lewis and O Connell Field propagation in a semiconductor structure Coherent light propagation in the framework of a microscopic model

International Workshop Till Von Egidy, Dietrich Habs, F J Hartmann, K E G Lobner, H Nifenecker, 1997-06-27 The acceleration of radioactive beams is a new and attractive field in nuclear physics One of the most intense sources of very neutron rich radioactive isotopes can be obtained by fission in a special uranium target close to the core of a research reactor Two such installations are being planned the PIAFE project in Grenoble and a similar facility at the new Munich research reactor FRM II Accelerated fission fragments will facilitate the production of the heaviest elements by fusion and the investigation of nuclear structure and nuclear reactions for astrophysical purposes This book discusses the application of fission fragments for many research fields **The Five-year Outlook**, 1980 *Unfolding the Matter of Nuclei* Società italiana di fisica, 1998 The nucleus and its constituents are a challenging problem The lectures collected in this book present a broad and comprehensive review of the current knowledge about nuclei They cover topics such as searching for signatures of the quarks in nuclei with electromagnetic probes and at much higher energies for signatures of the quark gluon plasma in ultrarelativistic nuclear collisions The attempts to obtain new nuclei in the laboratory are also discussed as well as the central role played by nuclear physics in the development of weak interactions Progress in all these areas rests on a deeper theoretical handling of the nuclear and nucleon structure The latter can also be addressed by relying on numerical solutions of QCD on a discrete space time lattice The advancement of computational capabilities has spurred a growing interest in this approach Finally the book deals with different paths toward solving non perturbative QCD New Horizons in Fundamental Physics Stefan Schramm, Mirko Schäfer, 2016-11-11 This volume presents the state of the art in selected topics across modern nuclear physics covering fields of central importance to research and illustrating their connection to many different areas of physics It describes recent progress in the study of superheavy and exotic nuclei which is pushing our knowledge to ever heavier elements and neutron richer isotopes Extending nuclear physics to systems that are many times denser than even the core of an atomic nucleus one enters the realm of the physics of neutron stars and possibly quark stars a topic that is intensively investigated with many ground based and outer space research missions as well as numerous theoretical works By colliding two nuclei at very high ultra relativistic energies one can create a fireball of extremely hot matter reminiscent of the universe very shortly after the big bang leading to a phase of melted hadrons and free quarks and gluons the so called quark gluon plasma These studies tie up with effects of crucial importance in other fields During the collision of heavy ions electric fields of extreme strength are produced potentially destabilizing the vacuum of the atomic physics system subsequently leading to the decay of the vacuum state and the emission of positrons In neutron stars the ultra dense matter might support extremely high magnetic fields far beyond anything that can be produced in the laboratory significantly affecting the stellar properties At very high densities general relativity predicts the stellar collapse to a black

hole However a number of current theoretical activities modifying Einstein's theory point to possible alternative scenarios where this collapse might be avoided These and related topics are addressed in this book in a series of highly readable chapters In addition the book includes fundamental analyses of the practicalities involved in transiting to an electricity supply mainly based on renewable energies investigating this scenario less from an engineering and more from a physics point of view While the topics comprise a large scope of activities the contributions also show an extensive overlap in the methodology and in the analytical and numerical tools involved in tackling these diverse research fields that are the forefront of modern science

Stocum, 2014-07-08 Regeneration the homeostatic ability to maintain tissue structure in the face of normal cell turnover or loss of tissue damaged by trauma or disease is an essential developmental process that continues throughout life As recently as a decade ago any serious discussion of the possibility of regeneration becoming a practical medical tool in the near future had the air of science fiction or over optimistic speculation The term regenerative medicine was certainly on many lips but few actually expected to soon see it applied in a clinical setting A tidal wave of discovery has changed that and investigating the cellular mechanisms of natural regeneration has become one of the hottest topics in developmental biology and biomedicine in general Many researchers entering the field find that the regeneration literature is still quite diffuse perhaps owing to the disparate biological systems that have been the object of study including hydra planaria newts axolotls and more recently several mouse strains The volume editors believe that an attempt to organize or systematize the literature is long overdue In this volume respected experts highlight the latest findings in vertebrate including mammals wound healing and regeneration They present eleven reviews that cover a wide range of topics from wound repair and its relationship to regeneration through systems including lenticular neural and musculoskeletal tissues and limbs to epigenetics and the role of the cell cycle Nuclear reprogramming and cellular plasticity which open the door for potential regenerative medical therapies for injury and degenerative disease are recurring themes throughout the book We are all now part of the regeneration revolution 1978 ERDA authorization United States.
