Conference Proceeding. New Perspectives in Scienze Education Pixel, 2016-03-04 *New Perspectives and Challenges in Econophysics and Sociophysics* Frédéric Abergel, Bikas K. Chakrabarti, Anirban Chakraborti, Nivedita Deo, Kiran Sharma, 2019-04-02 This book presents the latest perspectives and challenges within the interrelated fields of econophysics and sociophysics which have emerged from the application of statistical physics to economics and sociology Economic and financial markets appear to be in a permanent state of flux Billions of agents interact with each other giving rise to complex dynamics of economic quantities at the micro and macro levels With the availability of huge data sets researchers can address questions at a much more granular level than was previously possible Fundamental questions regarding the aggregation of actions and information and the coordination complexity and evolution of economic and financial networks are currently receiving much attention in the econophysics research agenda In parallel the sociophysics literature has focused on large scale social data and their interrelations In this book leading researchers from different communities economists sociologists financial analysts mathematicians physicists statisticians and others report on their recent work and their analyses of economic and social behavior **New Perspectives on Type Identity** Simone Gozzano, Christopher S. Hill, 2012-03-08 The type identity theory according to which types of mental state are identical to types of physical state fell out of favour for some years but is now being considered with renewed interest Many philosophers are critically re examining the arguments which were marshalled against it finding in the type identity theory both resources to strengthen a comprehensive physicalistic metaphysics and a useful tool in understanding the relationship between developments in psychology and new results in neuroscience This volume brings together leading philosophers of mind whose essays challenge in new ways the standard objections to type identity theory such as the multiple realizability objection and the modal argument Other essays show how cognitive science and neuroscience are lending new support to type identity theory and still others provide extend and improve traditional arguments concerning the theory s explanatory power

Parmenides: New Perspectives A. G. Long, Barbara M. Sattler, 2025-07-07 Parmenides is one of the most widely studied and controversial early Greek philosophers This edited collection examines Parmenides modes of argument and their legacy his poetics and intertextuality and the relation between different parts of his poem It also presents new research into Parmenides poem from a range of scholarly traditions together the essays show that we must fundamentally change our conception of the manner in which Parmenides communicated with his readers the division of his poem and his reasons for dividing it Parmenides New Perspectives challenges widespread assumptions such as that Parmenides left his readers to grapple with the enigmatic poem unaided that the poem is divided into three parts and that the first part the proem should be interpreted as allegory Against this it is argued that Parmenides wrote exegetical comments on his own poem and the proem echoes representations of deities and the cosmos in previous poetry in order to subvert them and open a new world

for poetic expression and intellectual inquiry Collectively this volume showcases some of the most thought provoking contemporary scholarship on Parmenides Chapter 5 of this work is available under the terms of a CC BY NC ND 4.0 International open access licence This part of the work is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations

Conference proceedings. New perspectives in science education 7th edition Pixel, 2018-03-19

New Perspectives On Einstein's $E = mc^2$ Young Suh Kim, Marilyn E Noz, 2018-09-18 Einstein's energy momentum relation is applicable to particles of all speeds including the particle at rest and the massless particle moving with the speed of light If one formula or formalism is applicable to all speeds we say it is Lorentz covariant As for the internal space time symmetries there does not appear to be a clear way to approach this problem For a particle at rest there are three spin degrees of freedom For a massless particle there are helicity and gauge degrees of freedom The aim of this book is to present one Lorentz covariant picture of these two different space time symmetries Using the same mathematical tool it is possible to give a Lorentz covariant picture of Gell Mann's quark model for the proton at rest and Feynman's parton model for the fast moving proton The mathematical formalism for these aspects of the Lorentz covariance is based on two by two matrices and harmonic oscillators which serve as two basic scientific languages for many different branches of physics It is pointed out that the formalism presented in this book is applicable to various aspects of optical sciences of current interest

Biological Information: New Perspectives - Proceedings Of The Symposium John C Sanford, Robert J Marks II, Michael J Behe, William A Dembski, Bruce L Gordon, 2013-06-03 In the spring of 2011 a diverse group of scientists gathered at Cornell University to discuss their research into the nature and origin of biological information This symposium brought together experts in information theory computer science numerical simulation thermodynamics evolutionary theory whole organism biology developmental biology molecular biology genetics physics biophysics mathematics and linguistics This volume presents new research by those invited to speak at the conference The contributors to this volume use their wide ranging expertise in the area of biological information to bring fresh insights into the many explanatory difficulties associated with biological information These authors raise major challenges to the conventional scientific wisdom which attempts to explain all biological information exclusively in terms of the standard mutation selection paradigm Several clear themes emerged from these research papers 1 Information is indispensable to our understanding of what life is 2 Biological information is more than the material structures that embody it 3 Conventional chemical and evolutionary mechanisms seem insufficient to fully explain the labyrinth of information that is life By exploring new perspectives on biological information this volume seeks to expand encourage and enrich research into the nature and origin of biological information

New Perspectives on Neo-Kantianism and the Sciences Helmut Pulte, Jan Baedke, Daniel Koenig, Gregor Nickel, 2024-07-05 This volume considers the exchange between the Neo Kantian tradition in German philosophy and the sciences from the last third of the nineteenth century to the Great war and partly

beyond During this period various scientific disciplines underwent modernisation processes characterised by an increasing empirical inclination and a decline in the influence of metaphysics the pluralisation of theories and the historical and pragmatic revitalisation of scientific claims against philosophy The various contributions look at the ways in which a certain Kantian orthodoxy was influenced by these new developments and whether and how itself had some impact on the development of the sciences The volume is not limited to the exact sciences of mathematics and physics which are particularly important for the Kantian tradition but also takes into account less recognised disciplines such as biology chemistry technology and psychology It is complemented by contributions that contrast Neo Kantianism with other scientific philosophies of the period in question New Perspectives in Magnetism of Metals Duk Joo Kim, 2013-03-09 The fundamental physics of metallic magnetism is not yet satisfactorily understood and continues to be interesting For instance although the detail is yet to be clarified magnetism is anticipated to be playing a principal role in producing the high T_c superconductivity of the oxides This book has two major objectives First it intends to provide an introduction to magnetism of metals in a broad sense Besides pursuing the mechanism of metallic magnetism itself it attempts to find and actively analyze magnetic causes hidden hitherto unnoticed behind various physical phenomena My foremost goal is to expose the fundamental role played by phonons in the mechanism of metallic magnetism I demonstrate how such a view also helps to elucidate a broad spectrum of other observations The second objective is to concisely introduce the standard many body points of view and techniques necessary in studying solid physics in general The book is intended to be self contained and starts with Chapter I containing a brief summary on the rudiments of quantum mechanics and statistical mechanics including the method of second quantization In the same spirit the foundation of magnetism in general is summarized in Chapter 2 and that for metals in particular the Stoner theory in Chapter 3 In Chapter 4 various linear responses of metallic electrons are systematically discussed with emphasis on the role of magnetism in them *Identifying, Measuring, and Valuing Knowledge-Based Intangible Assets: New Perspectives* Vallejo-Alonso, Belen, Rodriguez-Castellanos, Arturo, Arregui-Ayastuy, Gerardo, 2010-10-31 The main scope of the book is to highlight the importance of intangible resources in business management evidenced in their measurement and financial valuation and the need for a strategic analysis that enables them to be identified and then assessed Provided by publisher **Eye Tracking for STEM Education Research: New Perspectives** Pascal Klein, Martin Rusek, Maike Schindler, 2024-04-04 A modern approach to improving education uses the components of experimental scientific research practices based on objective data dissemination of results and the use of modern technologies STEM education research is maturing and new tools and analysis techniques become available As one example eye tracking the recording of persons eye movements has been growing in popularity as it enables researchers to study learning materials effectiveness problem solving and even students approaches during experimentation Eye movements as captured using eye tracking can reveal information about a student s attention and cognition on a process
