

undertone in the literature for some time now: that the evaluation of scientific hypotheses includes a judgmental component that is neither formalizable nor arbitrary and subjective. Earman broaches this idea at a number of points, usually under the rubric of "pragmatic considerations" or "plausibility arguments," but their status leaves him uncomfortable. I will illustrate this need for judgment by noting one of Earman's rare lapses. Earman concludes one of his success stories by claiming that when we write Bayes's law in the form  $P(h_i|e) = P(h_i)P(e|h_i)/\sum_i P(h_i)P(e|h_i)$  (where  $h_i$  is a specific hypothesis and  $i$  ranges over all of the hypotheses under consideration), then the law "shows how the probability of a hypothesis is boosted by evidence that eliminates rival hypotheses" (p. 79). The idea seems to be that, having dropped hypothesis from the set, the denominator is reduced and all of the posterior probabilities are thereby increased. But this is only one of the possible responses to the elimination of a hypothesis. Consider, for example, the case in which all the remaining hypotheses entail  $e$  and we have an exhaustive set of mutually exclusive hypotheses—perhaps as a result of including a "catchall" to cover the possibility that the explicit hypotheses are all wrong. In this case the denominator of Bayes's law must be one. Thus we must reassign our prior probabilities and, for the extreme Bayesian, there are no principles regulating this reassignment. Rather, we are engaged anew in the subjective assignment of prior probabilities and, except for the minimal constraints of the probability axioms, all bets are off. (Earman corrects this lapse on p. 164.)

Such lapses are rare, and for anyone interested in the current status and prospects of formal confirmation theory, this is the book to read.

James Bohman, *New Philosophy of Social Science: Problems of Indeterminacy*. MIT Press, Cambridge, MA, 1992. Pp. x, 273. \$32.50.

This is a very good book. It goes a considerable distance toward clarifying debates in both the philosophy of social science and the self-understanding of critical social theory. Bohman begins from a very salutary premise. He claims that in reflecting on the scope and nature of social science "the old dichotomies," because they derive almost exclusively from discredited empiricist views of science, "no longer serve any methodological purpose" (8).

Bohman's "main concern" (vii, 7) is to demonstrate that social science can both accommodate the unavoidable indeterminacy that reflective human agency injects into social relations *and* generate rigorous explanations. He quickly encounters the fairly obvious and arguably prior difficulty of deter-
