The Arts of the Grid Liora Bigon, Nava Shaked, 2021-10-04 This is the first collection of interdisciplinary scholarship to expand on gridded modalities with a strong affinity to the arts. It seeks to inspire new avenues of research by exploring a horizon of gridded relationships among humans between humans and the environment and between human and non human actors. By bringing together philosophical themes and applied practices the volume traces a genealogy of the grid as an exercise in grasping its inherent complexity and incomplete quality. A collective effort by a group of researchers practitioners and designers it promotes an understanding of gridded modalities as complex networks that interact with other networks generating new meanings and reflecting changes in thought.

Science Education at the Nexus of Theory and Practice, 2008-01-01 This book is a compilation of papers from the inaugural International Science Education Conference held at the National Institute of Education Singapore. The title Science Education at the Nexus of Theory and Practice reflects a pressing yet ongoing concern worldwide to integrate theory and practice in science education and the reader will find something of interest to both science education practitioners and researchers. The editors have decided to engage in written dialogue before each of the three sections to enrich the experience. Divided into three key sections: A Concepts conceptual change and science learning B science teacher development and learning and C access to science accessible science the 19 chapters will engender food for thought and in all likelihood transform classroom practices. All the contributors here provide important insights into the diverse education systems cultural backgrounds and societal norms through which science education can be realized.

Teaching Chemistry - A Studybook Ingo Eilks, Avi Hofstein, 2013-04-20 This book focuses on developing and updating prospective and practicing chemistry teachers pedagogical content knowledge. The 11 chapters of the book discuss the most essential theories from general and science education and in the second part of each of the chapters apply the theory to examples from the chemistry classroom. Key sentences tasks for self assessment and suggestions for further reading are also included. The book is focused on many different issues a teacher of chemistry is concerned with. The chapters provide contemporary discussions of the chemistry curriculum objectives and assessment motivation learning difficulties linguistic issues practical work student active pedagogies ICT informal learning continuous professional development and teaching chemistry in developing environments.

This book with contributions from many of the world's top experts in chemistry education is a major publication offering something that has not previously been available. Within this single volume chemistry teachers, teacher educators and prospective teachers will find information and advice relating to key issues in teaching such as the curriculum, assessment and so forth, but contextualised in terms of the specifics of teaching and learning of chemistry and drawing upon the extensive research in the field. Moreover, the book is written in a scholarly style with extensive citations to the literature, thus providing an excellent starting point for teachers and research students undertaking scholarly studies in chemistry education whilst at the same time offering insight and practical advice to support the planning of effective chemistry teaching. This book should be considered essential reading for those preparing for chemistry teaching and will be an important addition to the libraries of all concerned with chemical education. Dr Keith S. Taber, University of Cambridge, Editor, *Chemistry Education Research and Practice*. The highly regarded collection of authors in this book fills a critical void by providing an essential resource for teachers of chemistry to enhance pedagogical content knowledge for teaching modern chemistry. Through clever orchestration of examples and theory and with carefully framed guiding questions, the book equips teachers to act on the relevance of essential chemistry knowledge to navigate such challenges as context, motivation to learn, thinking activity, language assessment and maintaining professional expertise. If you are a secondary or post-secondary teacher of chemistry, this book will quickly become a favorite, well-thumbed resource. Professor Hannah Sevin, University of Massachusetts Boston.

Making Progress in Housing Sean McNelis, 2014-01-21. This book presents a new approach to housing research, one that is relevant to all the social sciences. Housing research is diverse and operates across many disciplines, approaches and methods, making collaboration difficult. This book outlines a methodological framework that enables researchers from many different fields to collaborate in solving complex and seemingly intractable housing problems. It shows how we can make progress in housing research and deliver better housing outcomes through an integrated approach. Drawing on the work of renowned Canadian methodologist, philosopher, theologian and economist Bernard Lonergan (1904-1984), McNelis outlines a framework for collaborative research: Functional Collaboration. This new form of collaboration divides up the work of housing research into functional specialties. These distinguish eight inter-related questions that arise in the process of moving from the current housing situation through to providing practical advice to decision makers. To answer each question, a different method is required. Making progress in housing is the result of finding new answers to this complete set of eight inter-related questions. This approach to collaboration opens up a new discourse on method in housing and social research, as well as new debates on progress and the nature of science. *The Psychology of Learning Science* Shawn M.
