New View Seas And Oceans:

Collected Reprints, Essa Institute for Oceanography, 1969 **Mapping an Atlantic World, circa 1500** Alida C. Metcalf, 2020-10-13 How did intricately detailed sixteenth century maps reveal the start of the Atlantic World Beginning around 1500 in the decades following Columbus's voyages the Atlantic Ocean moved from the periphery to the center on European world maps This brief but highly significant moment in early modern European history marks not only a paradigm shift in how the world was mapped but also the opening of what historians call the Atlantic World But how did sixteenth century chartmakers and mapmakers begin to conceptualize and present to the public an interconnected Atlantic World that was open and navigable in comparison to the mysterious ocean that had blocked off the Western hemisphere before Columbus's exploration In *Mapping an Atlantic World circa 1500* Alida C Metcalf argues that the earliest surviving maps from this era which depict trade colonization evangelism and the movement of peoples reveal powerful and persuasive arguments about the possibility of an interconnected Atlantic World Blending scholarship from two fields historical cartography and Atlantic history Metcalf explains why Renaissance cosmographers first incorporated sailing charts into their maps and began to reject classical models for mapping the world Combined with the new placement of the Atlantic the visual imagery on Atlantic maps which featured decorative compass roses animals landscapes and native peoples communicated the accessibility of distant places with valuable commodities Even though individual maps became outdated quickly Metcalf reveals new mapmakers copied their imagery which then repeated on map after map Individual maps might fall out of date be lost discarded or forgotten but their geographic and visual design promoted a new way of seeing the world with an interconnected Atlantic World at its center Describing the negotiation that took place between a small cadre of explorers and a wider class of cartographers chartmakers cosmographers and artists Metcalf shows how exploration informed mapmaking and vice versa Recognizing early modern cartographers as significant agents in the intellectual history of the Atlantic *Mapping an Atlantic World circa 1500* includes around 50 beautiful and illuminating historical maps *Deep Ocean Circulation* T. Teramoto, 1993-05-10 This volume comprises the final report of the research project entitled the Dynamics of the Deep Ocean Circulation The layered structure of the subsurface circulation which had been predicted in the hypothetical model proposed prior to the research is verified through Eulerian and Lagrangian measurements of current By the use of the numerical model the deep circulation of the Philippine Sea which has been long supposed to be isolated from the North Pacific is revealed to be derived in close association with that of the latter ocean Behavior of the deep current around the equator is also clarified by numerical modeling By the extensive use of sediment trapping technology it becomes clear that sinking sediments play an important role in the distribution of chemical substances in the deep ocean Graduate students in the field of oceanography will find this a good textbook ***Ocean Circulation and Climate*** John A. Church, Neil J. White, Catia M. Domingues, Didier P. Monselesan, Elaine R. Miles, 2013-10-22 The ocean has the largest heat capacity in the

climate system and as a result the ocean plays a critical role in the climate. Changes in ocean heat content dominate the Earth's energy storage and the ocean's thermal expansion has been a major contributor to sea level rise in the twentieth century and likely to be the largest contributor in the twenty-first century. The agreement between changes in ocean heat storage over recent decades and changes in the Earth's radiative balance within uncertainties provides strong support for current understanding of anthropogenic climate change. As a result of improvements in observations and modeling of sea level and components contributing to sea level change, there is now an improved explanation for twentieth-century sea level rise. Models project a continuing sea level rise during the twenty-first century and beyond. However, a number of uncertainties remain in our understanding of the global mean and regional distribution of sea level rise resulting from changes in ocean circulation and changes in the Earth's gravitational field. Ocean ice sheet interactions are important for quantitatively estimating future ice sheet contributions to sea level rise.

The Law of the Seabed Catherine Banet, 2020-01-29. The Law of the Seabed reviews the most pressing legal questions raised by the use and protection of natural resources on and underneath the world's seabeds. While barely accessible, the seabed plays a major role in the Earth's ecological balance. It is both a medium and a resource and is central to the blue economy. New uses and new knowledge about seabed ecosystems and the risks of disputes due to competing interests urge reflection on which regulatory approaches to pursue. The regulation of ocean activities is essentially sector-based, and the book puts in parallel the international and national regimes for seabed mining, oil and gas, energy generation, bottom fisheries, marine genetic resources, carbon sequestration, and maritime security operations both within and beyond the national jurisdiction. The book contains seven parts respectively addressing the definition of the seabed from a multidisciplinary perspective, the principles of jurisdiction/delimitation under the United Nations Convention on the Law of the Sea (UNCLOS), the regimes for use of non-living, living, and marine biodiversity resources, the role of state and non-state actors, the laying and removal of installations, the principles for sustainable and equitable use, common heritage of mankind, precaution, benefit sharing, and management tools to ensure coexistence between activities as well as the protection of the marine environment.

Coastal, Harbour and Ocean Engineering P. V. Timbadiya, M. C. Deo, Vijay P. Singh, 2023-06-05. This book comprises the proceedings of the 26th International Conference on Hydraulics, Water Resources, and Coastal Engineering (HYDRO 2021) focusing on a broad spectrum of emerging opportunities and challenges in the field of coastal, harbor, and ocean engineering. It covers a range of topics including but not limited to coastal disasters including tsunamis, cyclones, and storm surges; sea level rise; coastal structures and oceanography; wave structure interaction, etc. Presenting recent advances in the form of illustrations, tables, and text, it offers readers insights for their own research. In addition, the book addresses fundamental concepts and studies in the field of coastal, harbor, and ocean engineering, making it a valuable resource for both beginners and researchers wanting to further their understanding of hydraulics, water resources, and coastal engineering.
