*New Tertiary Mathematics: pt. 2. Basic applied mathematics* Charles Plumpton, 1980      **New Tertiary Mathematics C.** Plumpton, P. S. W. MacIwaine, 2016-05-23 *New Tertiary Mathematics Volume 2 Part 2 Further Applied Mathematics* deals with various topics of theoretical mechanics and probability from statics and the dynamics of a rigid body to the dynamics of a particle with one and two degrees of freedom. Many examples of varying difficulty are worked in the text and exercises are added after each major topic is covered. This book is comprised of five chapters and opens with a discussion on statics with particular reference to the analysis of systems of forces in three dimensions along with virtual work, stability and the catenary. Complicated equilibrium problems are considered. The reader is then introduced to the dynamics of a particle in one and two dimensions as well as the implications of the Galilean transformation and the general theorems of motion for a system of particles. These theorems are applied to simple cases of the motion of a rigid body. The final chapter on probability examines normal and Poisson distributions, Markov chains and miscellaneous problems. This monograph will be a useful resource for mathematical pupils and students engaged in private study.      **New Tertiary Mathematics** Charles Plumpton, P. S. W.
