that can be defended against critics can be effective in throwing the light on violations and promoting the observance of
human rights for all The contributors to this book including experts in political science public health law forensic pathology
and statistics illustrate good statistical practice in the field of human rights and show the importance of collaboration
between statisticians and other professionals The treatment is largely nonmathematical and the examples provide broad
coverage of all features of the collection and use of statistical data on human rights violations For readers who would like to
do their own analyses an extensive guide to human rights data sources is included This book is the first to describe and
