Second ASCE Specialty Conference on Structural Design of Nuclear Plant Facilities, New Orleans, Louisiana December 8-10, 1975: Papers presented at the conference not available for publication prior to the conference , **Structures for Nuclear Facilities** M.Y.H. Bangash,2011-08-05 This book provides a general introduction to the topic of buildings for resistance to the effects of abnormal loadings The structural design requirements for nuclear facilities are very unique In no other structural system are extreme loads such as tornadoes missile and loud interaction earthquake effects typical in excess of any recorded historical data at a site and postulated system accident at very low probability range explicitly considered in design It covers the whole spectrum of extreme load which has to be considered in the structural design of nuclear facilities and reactor buildings the safety criteria the structural design the analysis of containment Test case studies are given in a comprehensive treatment Each major section contains a full explanation which allows the book to be used by students and practicing engineers particularly those facing formidable task of having to design complicated building structures with unusual boundary conditions **Second ASCE Specialty Conference on Structural Design of Nuclear Plant**

Emmerling,2012-12-06 Euromech Colloquium Nr 165 The shell theory development has changed its emphasis during the last two decades Nonlinear problems have become its main motive But the analysis was until recently predominantly devoted to shells designed for strength and stiffness Nonlinearity is here relevant to buckling to intensively vary able stress states These are with exception of some limit cases covered by the quasi shallow shell theory The emphasis of the nonlinear analysis begins to shift further to shells which are designed for and actually capable of large elastic displacements These shells used in industry for over a century have been recently termed flexible shells The European Mechanics Colloquium 165 was

concerned with the theory of elastic shells in connection with its applications to these shells The Colloquium was intended to discuss 1 The formulations of the nonlinear shell theory different in the generality of kinematic hypothesis and in the choice of dependent variables 2 The specialization of the shell theory for the class of shells and the respective elastic stress states assuring flexibility 3 Possibilities to deal with the complications of the buckling analysis of flexible shells caused by the precritical perturbations of their shape and stress state 4 Methods of solution appropriate for the nonlinear flexible shell problems 5 Applications of the theory There were 71 participants the sessions were presided over in that order by E Reissner J G Simmonds W T Koiter R C Tennyson F A Emmerling E Rarnm E L Axelrad Structural Design of Nuclear Plant
