Images and Identity in Fifteenth-century Florence Patricia Lee Rubin, 2007-01-01 An exploration of ways of looking in Renaissance Florence where works of art were part of a complex process of social exchange Renaissance Florence of endless fascination for the beauty of its art and architecture is no less intriguing for its dynamic political economic and social life In this book Patricia Lee Rubin crosses the boundaries of all these areas to arrive at an original and comprehensive view of the place of images in Florentine society The author asks an array of

Ancient Astronomical Observations and the Study of the Moon's Motion (1691-1757) John M. Steele,2012-02-17 The discovery of a gradual acceleration in the moon s mean motion by Edmond Halley in the last decade of the seventeenth century led to a revival of interest in reports of astronomical observations from antiquity These observations provided the only means to study the moon s secular acceleration as this newly discovered acceleration became known This book contains the first detailed study of the use of ancient and medieval astronomical observations in order to investigate the moon s secular acceleration from its discovery by Halley to the establishment of the magnitude of the acceleration by Richard Dunthorne Tobias Mayer and J r me Lalande in the 1740s and 1750s Making extensive use of previously unstudied manuscripts this work shows how different astronomers used the same small body of preserved ancient observations in different ways in their work on the secular acceleration In addition this work looks at the wider context of the study of the moon s secular acceleration including its use in debates of biblical chronology whether the heavens were made up of ether and the use of astronomy in determining geographical longitude It also discusses wider issues of the perceptions and knowledge of ancient and medieval astronomy in the early modern period This book will be of interest to historians of astronomy astronomers and historians of the ancient world
