ABSTRACT

The studies state that there have been some problems, shortcomings and insufficiencies during the implementation of revised Social Studies Curriculum based on constructivist approach in Turkey. The purpose of this paper is to evaluate the Fifth Grade Social Studies Curriculum in terms of its needs assessment, goals, content, teaching-learning process and assessment process subject to curriculum development basis. The data was collected through "Curriculum Evaluation Analysis Form", developed by an academic in Curriculum and Instruction Department of Afyon Kocatepe University and 3-doctoral students in the same area and analyzed through document analysis. The reliability of scale was calculated as 0.8. It is concluded that the curriculum was developed on the basis of constructivist approach in terms of its objectives, content, teaching-learning process and assessment process, but it is seen that the objectives are determined without consideration of students' interest and level and also there is disregardation of regional discrepancies in the process of determination of needs.

INTRODUCTION

Social Studies is quite important in terms of preparing children for life, and providing them with specific habits and skills in Primary school. National Council for the Social Studies (1994) defines social studies as:

...the integrated study of the social sciences and humanities to promote civic competence. Within the school curriculum, social studies provides coordinated, systematic study drawing upon such disciplines as anthropology, archaeology, economics, geography, history, law, philosophy, political science, psychology, religion, and sociology, as well as appropriate content from the humanities, mathematics, and natural sciences. The primary purpose of social studies is to help young people make informed and reasoned decisions for the public good as citizens of a culturally diverse, democratic society in an interdependent world.

According to the Council (1994), the aim of social studies is "the promotion of civic competence—the knowledge, intellectual processes, and democratic dispositions required of students to be active and engaged participants in public life." In parallel with this contemporary definition, Ministry of National Education (2006a) redefined Social Studies as "to be engaged to assist the individual social existence; history, geography,

economics, sociology, anthropology, psychology, philosophy, political science and law to pick that reflect the social studies and civics; learning areas comprising combining under one unit or theme; human interaction with the social and physical environment of the past, present and future is examined in the context; it is established as a primary school course starting from the concept of public education" and in this context, major structural changes were with the concept of learning, curriculum, textbooks, and classroom activities in the social studies curriculum in Turkey in 2004.

In general, the revised Social Studies Curriculum brings an innovative perspective. Student-centered and individual differences are further emphasized in this curriculum, thematic approach is taken into account in the regulation of content and learning areas have been identified in this framework. One of the most significant changes reflected in the new curriculum is the identification of new disciplinary objectives and associated them with learning areas. Teachers are given roles as guide, as well as co-provider, writer, facilitating self-developer, planner, router, a person accounts of individual differences (ERG Report, 2006).

In addition to this, it is observed that the new curriculum focuses on skills. The skills such as critical thinking, creative thinking, communication, problem solving, research, decision making and using information technologies, being entrepreneurial, concerning on personal and social values are highlighted in the curriculum. web sep 14 2023 example of isotopes hydrogen has 3 isotopes namely protium 1 h 1 deuterium 1 h 2 tritium 1 h 3 example of isobars argon 18 ar 40 potassium 19 k 40 and calcium 20 ca 40 have the same atomic mass read more isotopes of hydrogen

atomic number isotopes and isobars definition examples and - Feb 10 2023

web the atoms having the same atomic number but different mass number are called isotopes to learn more about the atomic number isotopes and isobars its definition examples and FAQs visit byju's for more content

define isobars and explain the difference between isotopes and isobars - Jun 02 2022

web an example of isotopes is the element hydrogen which has three isotopes tritium deuterium and protium 40 s and 40 ar are isobars as both of them have the same atomic mass an example of isotopes is the element nitrogen which has two isotopes which include nitrogen 14 and nitrogen 15

isotopes isobars isotones definition examples diagrams - May 13 2023

web definition isotopes the atoms belonging to the same element having same atomic number Z but different mass number A are called isotopes for example carbon 12 carbon 13 and carbon 14 are three isotopes of the element carbon with mass numbers 12 13 and 14 respectively revise with concepts atomic masses and composition of nucleus

isotope examples definition britannica - Apr 12 2023

web aug 31 2023 the three share the place in the periodic table assigned to atomic number 1 and hence are called isotopes from the greek isos meaning same and topos signifying place of hydrogen many important properties of an isotope depend on its mass

isotopes isobars and isotones easy definition and examples - Oct 06 2022

web aug 16 2022 isotones atoms of different elements which have the same number of neutrons but different atomic numbers are called isotones in a general word the elements must have a same number of protons but different numbers of protons to be isotones isotones examples 614 c 715 n 916 o difference between isotopes and isobars and

understanding of isotopes isobars isotones unacademy - May 01 2022

web isotopes isobars and isotones are atoms with the same number of protons but different numbers of neutrons isobars are atoms of different chemical elements with equal atomic mass values whereas isotones are atoms of different chemical elements with an equal number of neutrons in the atomic nucleus

isotopes and isobars difference between isotopes and isobars - Jul 15 2023

web isobar are elements that differ in chemical properties but have the same physical property so we can say that isobars are those elements that have a different atomic number but the same mass number in contrast isotopes are those elements having the same atomic number and different mass numbers

isotopes and isobars explanation example uses and faqs - Jun 14 2023

web sep 13 2023 an example of two isotopes and isobars is nickel and iron these both have the same mass number which is 58 whereas the atomic number of nickel is 28 and the atomic number of iron is 26 let us consider an example of 2 things which appear to be the same in colour and in their physical appearance such that we cannot distinguish

isotope meaning what are isotopes definition and examples - Jul 03 2022

web isotope meaning what are isotopes isotopes can be defined as the variants of chemical elements that possess the same number of protons and electrons but a different number of neutrons

isobar nuclide wikipedia - Aug 04 2022

web isobars are atoms nuclides of different chemical elements that have the same number of nucleons correspondingly isobars differ in atomic number or number of protons but have the same mass number an example of a series

isobars definition difference with isotopes videos and solved - Mar 11 2023

web isotope isobar isotopes are atomic structures of same elements having a different mass number atomic mass isobars are different chemical elements having same atomic mass atomic numbers of all isotopic forms of a single element are equal atomic numbers of isobars vary from each other they are the same chemical element but their forms are
