Great Power Competition for Overseas Bases Robert E. Harkavy,2013-10-22 Great Power Competition for Overseas Bases The Geopolitics of Access Diplomacy explores the geopolitics of the major powers overseas basing systems in relation to global strategies and changes in the international system in three fairly distinct phases the interwar early postwar and recent

postwar periods This book links the great powers competition for overseas bases to several streams of more or less contemporary international relations theory This monograph consists of seven chapters and opens with an introduction to the diplomacy of basing access followed by a discussion on the different types or purposes of basing access as they have evolved over the past several decades in response to changes in diplomacy and military technology The major powers overseas basing access networks in the consecutive interwar early postwar and recent postwar periods are then reviewed along with the earlier corpus of geopolitical theory specifically as it relates to basing diplomacy Emphasis is on the conflicting assumptions about what reciprocal strategic advantages and disadvantages inhere to the geographic positions of the United States and USSR The final chapter considers a number of functional areas of world politics that are closely intertwined with basing diplomacy and relates the competition for facilities to raw materials access surrogate wars strategic deterrence arms control balances of payments arms sales and aid alliances and other such staple concerns of international relations This book will be of interest to political scientists military and government officials diplomats and policymakers

Tomcats and Eagles Tal Tovy, 2022-11-15 During the first half of the 1970s two new fighter aircraft entered operational service in the United States The Navy's Grumman F 14 Tomcat and the Air Force's McDonnell Douglas F 15 Eagle These two aircraft were part of the backbone of the tactical air power of the United States their introduction was accompanied by comprehensive reforms in pilot training as well as new technologies and weapon systems In addition to the tactical significance of the two aircraft as innovative fighting platforms however their development and deployment should be viewed within a broad geopolitical and geostrategic context Tovy explains how the F 14 Tomcat and the F 15 Eagle were an integral part of the aerial component of the conventional arms race within the Cold War He argues that the trend of Soviet advanced weapon systems development created a perception of threat to the United States challenging its conventional military power Tomcats and Eagles explores how the Vietnam War accelerated the need for advanced fighter interceptors and that the lessons learned from aerial combat in Vietnam had a significant impact on the design and operational characteristics of the F 15 The author reveals that after F 14s were sold to Iran and F 15s to Israel in the second half of the 1970s these jets were integrated into their armed forces leading to Israel's use of the F 15 during the First Lebanese War Finally the author provides an in depth look at the operation of the F 14 and F 15 in U S actions in Southeast Asia beginning with the Tanker Wars in the mid 1980s through Operation Desert Storm and Operation Enduring Freedom and ending with Operation Iraqi Freedom

The Tools of Owatsumi Desmond Ball, Richard Tanter, 2015-01-21 Japan is quintessentially by geography a maritime country Maritime surveillance capabilities underwater shore based and airborne are critical to its national defence posture This book describes and assesses these capabilities with particular respect to the underwater segment about which there is little strategic analysis in publicly available literature Since the end of the Cold War Chinese oceanographic and navy vessels have intruded into Japanese waters with increasing

frequency not counting their activities in disputed waters such as around the Senkaku Diaoyu Islands and Okinotorishima where China and Japan have overlapping territorial claims These intrusions have increasingly involved warships including submarines sometimes acting quite aggressively Japan maintains an extraordinary network of undersea hydrophone arrays connected to shore stations which are typically equipped with electronic intelligence ELINT systems for monitoring identifying and tracking submarine and surface traffic in its internal straits and surrounding seas Some parts of this network are operated jointly with and are of crucial importance to the US Navy Japan's superlative submarine detection capabilities would be of decisive advantage in any submarine engagement But the relevant facilities are relatively vulnerable which makes them very lucrative targets in any conflict This introduces compelling escalatory dynamics including the involvement of US forces and possible employment of nuclear options

espionage and engineering set at the height of the Cold War a mix between The Hunt for Red October and Argo about how the CIA the U S Navy and America's most eccentric mogul spent six years and nearly a billion dollars to steal the nuclear armed Soviet submarine K 129 after it had sunk to the bottom of the Pacific Ocean all while the Russians were watching In the early hours of February 25 1968 a Russian submarine armed with three nuclear ballistic missiles set sail from its base in Siberia on a routine combat patrol to Hawaii Then it vanished As the Soviet Navy searched in vain for the lost vessel a small highly classified American operation using sophisticated deep sea spy equipment found it wrecked on the sea floor at a depth of 16 800 feet far beyond the capabilities of any salvage that existed But the potential intelligence assets onboard the ship the nuclear warheads battle orders and cryptological machines justified going to extreme lengths to find a way to raise the submarine So began Project Azorian a top secret mission that took six years cost an estimated 800 million and would become the largest and most daring covert operation in CIA history After the U S Navy declared retrieving the sub impossible the mission fell to the CIA's burgeoning Directorate of Science and Technology the little known division responsible for the legendary U 2 and SR 71 Blackbird spy planes Working with Global Marine Systems the country's foremost maker of exotic deep sea drilling vessels the CIA commissioned the most expensive ship ever built and told the world that it belonged to the reclusive billionaire Howard Hughes who would use the mammoth ship to mine rare minerals from the ocean floor In reality a complex network of spies scientists and politicians attempted a project even crazier than Hughes's reputation raising the
