Trusting Doctors Jonathan B. Imber, 2015-09-01 For more than a century the American medical profession insisted that doctors be rigorously trained in medical science and dedicated to professional ethics. Patients revered their doctors as representatives of a sacred vocation. Do we still trust doctors with the same conviction? In *Trusting Doctors* Jonathan Imber attributes the development of patients' faith in doctors to the inspiration and influence of Protestant and Catholic clergymen during the nineteenth and early twentieth centuries. He explains that as the influence of clergymen waned and as reliance on medical technology increased patients' trust in doctors steadily declined. *Trusting Doctors* discusses the emphasis that Protestant clergymen placed on the physician's vocation, the focus that Catholic moralists put on specific dilemmas faced in daily medical practice and the loss of unchallenged authority experienced by doctors after World War II when practitioners became valued for their technical competence rather than their personal integrity. Imber shows how the clergy gradually lost their impact in defining the physician's moral character and how vocal critics of medicine contributed to a decline in patient confidence. The author argues that as modern medicine becomes defined by specialization, rapid medical advance, profit driven industry and ever more anxious patients, the future for a renewed trust in doctors will be confronted by even greater challenges. *Trusting Doctors* provides valuable insights into the religious underpinnings of the doctor-patient relationship and raises critical questions about the ultimate place of the medical profession in American life and culture.

The first section includes chapters on histamine in the neural and cancer stem cell niches and emerging concepts of stem cell organization in the normal lung and in lung cancer. The section on Pluripotent Stem Cells includes discussion of the differentiation of dendritic cells from human induced pluripotent stem cell and the molecular mechanisms involved in reprogramming human somatic cells to generate induced pluripotent stem cells. Additional chapters cover the differentiation of induced pluripotent stem cells into functional cardiomyocytes, characteristics of satellite cells and multipotent adult stem cells in the skeletal muscle. The section on Dendritic Stem Cells explores the critical role of notch signaling in the differentiation and function of dendrite. Other chapters cover hypertensive emergencies in children after stem cell transplantation and overcoming the radio resistance of lung cancer stem cells. The section on Regenerative Medicine reports on experiments on improved renal revascularization in pigs using stem cells and phenotypic correction of murine Hemophilia A using cell based therapy. The concluding section General Applications discusses such topics as methods in mathematical modeling for stem cells as well as molecular and functional characterization of human
