Moving Horizons:

Online Optimization of Large Scale Systems Martin Grötschel, Sven O. Krumke, Joerg Rambau, 2013-03-14 In its thousands of years of history mathematics has made an extraordinary career. It started from rules for bookkeeping and computation of areas to become the language of science. Its potential for decision support was fully recognized in the twentieth century only vitally aided by the evolution of computing and communication technology. Mathematical optimization in particular has developed into a powerful machinery to help planners. Whether costs are to be reduced, profits to be maximized or scarce resources to be used wisely, optimization methods are available to guide decision making. Optimization is particularly strong if precise models of real phenomena and data of high quality are at hand, often yielding reliable automated control and decision procedures. But what if the models are soft and not all data are around? Can mathematics help as well? This book addresses such issues, e.g. problems of the following type: An elevator cannot know all transportation requests in advance. In which order should it serve the passengers? Wing profiles of aircrafts influence the fuel consumption. Is it possible to continuously adapt the shape of a wing during the flight under rapidly changing conditions? Robots are designed to accomplish specific tasks as efficiently as possible. But what if a robot navigates in an unknown environment? Energy demand changes quickly and is not easily predictable over time. Some types of power plants can only react slowly. **Hans-Georg Gadamer** Karl Simms, 2015-03-24 Hans Georg Gadamer's theory of hermeneutics is one of the most important modern theories of interpretation and understanding, and at its heart is the experience of reading literature. In this clear and comprehensive guide to Gadamer's thought, Karl Simms presents an overview of Gadamer's life and works, outlining his importance to hermeneutic theory and its place in literary studies, explains and puts into context his key ideas including dialogue, phronesis, play, tradition and horizon, shows how Gadamer's ideas have been influential in the interpretation of literary texts, explains Gadamer's debates with key contemporaries and successors such as Habermas, Ricoeur and Derrida, provides detailed suggestions for further reading. With a significance that crosses disciplinary boundaries from cultural studies, literary theory and philosophy through to history, music and fine arts, Gadamer's pioneering work on hermeneutic theory remains of crucial importance to the study of texts in the humanities. *Education, Decolonization and Development* Dip Kapoor, 2009-01-01 Education, development and decolonization provides a historical, theoretical and practical interdisciplinary analysis of the contemporary trajectory of colonization, including internal colonization through the linked projects of eurocentric development, globalization and the uncritical adoption of colonial modes of education and learning in schools, communities, social movements and the progressive church in Asia, Africa and the Americas. Critical perspectives on colonialism, education and development are deployed in the interests of a continued praxis of decolonization. This collection is intended for graduate and senior undergraduate students in adult education, development studies, social movement learning and decolonization and cultural studies, as well as for civil society and social movement actors, development practitioners and socio-cultural workers.

and popular educators working in North South engagements A mix of theoretical and applied practical content ensures that this collection will be of use to theoreticians analysts and practitioners alike *Advanced Strategies in Control Systems with Input and Output Constraints* Sophie Tarbouriech, Germain Garcia, Adolf H. Glattfelder, 2007-07-13 Physical safety and technological constraints suggest that control actuators can neither provide unlimited amplitude signals nor unlimited speed of reaction The techniques described in this book are useful for industrial applications in aeronautical or space domains and in the context of biological systems Such methods are well suited for the development of tools that help engineers to solve analysis and synthesis problems of control systems with input and output constraints *Media Consumption in Malaysia* Tony Wilson, 2015-01-09 How do visitors immersing themselves in material places such as shopping malls or video sites online make sense of the experience enabling criticizing or consenting to content How is this evident in behaviour Reflecting on accounts by Chinese Indian Malay and Indigenous members of Malaysian society this book addresses these questions from a practices perspective increasingly adopted by scholars in marketing and media studies The volume provides an account of practices theory from its origins in critical hermeneutics such as Heidegger Gadamer and Ricoeur as reflecting on the processes of embodied understanding developing alongside interpretive and reception theory Part I draws upon authors as diverse as Heidegger and Henry Jenkins with a practices perspective on media and mall consuming shown as developing from forty years of theorizing about audience activity An empirical study of Malaysian blogging and branding on YouTube exemplifies this approach Part II considers Malaysians absorbed in social media sites as everyday visitors and the subjects of consumer research The book then returns to the material world exploring the horizons of understanding from which Malaysians enter their mediated malls and concludes by positioning media practices theory within a spectrum of philosophical ideas Recognizing the current re turn in Consumer and Media Studies to employing hermeneutics as an account of our embodied human understanding this book presents its major philosophical proponents showing how close attention to their writing can now inform and shape research on ubiquitous screen users As such it will be of particular interest to students and scholars of Media Studies Asian Studies and Marketing Studies *Cybernetics and Systems Theory in Management: Tools, Views, and Advancements* Wallis, Steven E., 2009-12-31 Cybernetics and Systems Theory in Management Tools Views and Advancements provides new models and insights into how to develop test and apply more effective decision making and ethical practices in an organizational setting **Extensional Tectonics** Ibrahim Çemen, Elizabeth J. Problem-Based Learning in Higher Education: Untold Stories Maggi Savin-Baden, 2000-04-16 Problem based learning is becoming increasingly popular in higher education because it is seen to take account of pedagogical and societal trends such as flexibility adaptability problem solving and critique in ways which many traditional methods of learning do not There is little known about what actually occurs inside problem based curricula in terms of staff and student lived experience This book discloses ways in which learners and teachers manage complex and diverse learning in the context of their lives in a fragile and often incoherent world These are the untold stories The central argument of the book is that the potential and influence of problem based learning is yet to be realized personally pedagogically and professionally in the context of higher education It explores both the theory and the practice of problem based learning and considers the implications of implementing problem based learning organizationally Problem based learning is contested and murky ground in higher education In her study Maggi Savin Baden clears the thickets offering a bold ambitious framework and in the process gives us a compelling argument for placing problem based learning in the centre of higher education as an educational project It is a story not to be missed Professor Ronald Barnett This is a challenging and very worthwhile read for anyone concerned with the future of higher education and issues of teaching and learning The metaphor of untold stories is powerfully explored at the level of staff and student experience of problem based learning Professor Susan Weil

Economic Model Predictive Control Matthew Ellis, Jinfeng Liu, Panagiotis D. Christofides, 2016-07-27 This book presents general methods for the design of economic model predictive control EMPC systems for broad classes of nonlinear systems that address key theoretical and practical considerations including recursive feasibility closed loop stability closed loop performance and computational efficiency Specifically the book proposes Lyapunov based EMPC methods for nonlinear systems two tier EMPC architectures that are highly computationally efficient and EMPC schemes handling explicitly uncertainty time varying cost functions time delays and multiple time scale dynamics The proposed methods employ a variety of tools ranging from nonlinear systems analysis through Lyapunov based control

techniques to nonlinear dynamic optimization The applicability and performance of the proposed methods are demonstrated through a number of chemical process examples The book presents state of the art methods for the design of economic model predictive control systems for chemical processes In addition to being mathematically rigorous these methods accommodate key practical issues for example direct optimization of process economics time varying economic cost functions and computational efficiency Numerous comments and remarks providing fundamental understanding of the merging of process economics and feedback control into a single framework are included A control engineer can easily tailor the many detailed examples of industrial relevance given within the text to a specific application The authors present a rich collection of new research topics and references to significant recent work making Economic Model Predictive Control an important source of information and inspiration for academics and graduate students researching the area and for process engineers interested in applying its ideas

Silverman, 1985-09-30 Phenomenology in America has developed in unique directions with respect to descriptive analysis and in relation to interdisciplinary fields Descriptions examines current trends in phenomenology It begins by reflecting on phenomenological description itself then takes phenomenology into such areas as time science and the arts the social and into the universities Ranging from the development of theory by such well known philosophers as Maurice Natanson and Robert Sokolowski this

Conklin, 2024-05-01 Originally published in 1998 The Phenomenology of Modern Legal Discourse recovers the suffering which is concealed as lawyers judges and other legal officials resignify a harm through the special vocabulary and grammar which constitutes legal language At the moment of re signification an untranslatable gap erupts between the knowers special language and the embodied meanings of the non knower The Phenomenology claims that the gap can be unconcealed if the knowers of the special language reconsider their assumptions about legal meaning the body and desire With a broad grasp of diverse problematics from the legal procedures legal discourses and legal theory of three jurisdictions to exemplify his claims the author interweaves arguments which draw from Edmund Husserl s and Maurice Merleau Ponty s insights about meaning The author s effort demonstrates how one may unconceal lived laws through a re reading of the role of the experiential body in legal signification The author s effort to retrieve the embodiment of legal meaning de stabilizes deep assumptions of contemporary lawyers and legal theorists **Situated Politeness** Bethan L. Davies, Michael Haugh, Andrew John

Merrison, 2011-05-19 Pragmatic and sociolinguistic analyses of im politeness have usually been dependent on context and cultural frames of reference This new study approaches the concept from an original perspective namely situatedness Although politeness research often concentrates on examining how speeches or discourses themselves are situated with regards to different places and contexts the focus on just one situation and various text types within it can also be of value Situated Politeness is concerned with disentangling the factors which govern our behaviour within a given social context as well as across them A range of expanding disciplines including corpus linguistics critical discourse analysis and conversation analysis are brought to bear on the topic and this work will be of interest to a diverse global audience
