*Relocating Modern Science* K. Imperial Contagions Robert Peckham, David M. Pomfret, 2013-01-01 Imperial Contagions argues that there was no straightforward shift from older enclavist models of colonial medicine to a newer emphasis on prevention and treatment of disease among indigenous populations as well as European residents It shows that colonial medicine was not at all homogeneous on the ground but was

riven with tensions and contradictions Indigenous elites contested and appropriated Western medical knowledge and practices for their own purposes Colonial policies contained contradictory and cross cutting impulses This book challenges assumptions that colonial regimes were uniformly able to regulate indigenous bodies and that colonial medicine served as a tool of empire

**Urban Discourses of Crisis, Resilience, and Resistance** Eric Prieto, Liam Lanigan, Anni Lappela, 2025-07-11 This volume seeks to address questions of urban crisis from an interdisciplinary perspective that foregrounds the particular roles that literature and the creative arts play in both conceptualizing and addressing the multiple challenges facing cities Noting that the successive crises of recent years from the 2008 recession to COVID 19 seem to have put an end to the triumphalist tone of much urban writing in the 1990s this book argues that the current historical moment calls for a different kind of urban discourse focused on reassessment and

regrouping This edited collection features a variety of different approaches including close readings of literary works interviews essays in cultural and architectural history and sociological ethnographic and urban planning studies These chapters explore a range of challenges currently faced by cities and foreground the search for solutions **Archibald Liversidge, FRS** Roy M. Science in the 20th Century and Beyond Jon Agar, 2013-05-20 A compelling history of science from 1900 to the present day this is the first book to survey modern developments in science during a century of unprecedented change conflict and uncertainty The scope is global Science's claim to access universal truths about the natural world made it an irresistible resource for industrial empires ideological programs and environmental campaigners during this period Science has been at the heart of twentieth century history from Einstein's new physics to the Manhattan Project from eugenics to the Human Genome Project or from the wonders of penicillin to the promises of biotechnology For some science would only thrive if autonomous and kept separate from the political world while for others science was the best guide to a planned and better future Science was both a routine if essential part of an orderly society and the disruptive source of bewildering transformation Jon Agar draws on a wave of recent scholarship that explores science from interdisciplinary perspectives to offer a readable synthesis that will be ideal for anyone curious about the profound place of science in the modern world
