Moving Objects Databases:

Moving Objects Databases Ralf Hartmut Güting, Markus Schneider, 2005-08-23 First uniform treatment of moving objects databases the technology that supports GPS and RFID data analysis *Managing Moving Objects Databases with Uncertainty* Goce Trajcevski, 2002 *Moving Objects Management* Xiaofeng Meng, Jidong Chen, 2011-01-27 We live in an age of rapid technological development The Internet already affects our lives in many ways Indeed we continue to depend more and more intrinsically on the Internet which is increasingly becoming a fundamental piece of societal infrastructure just as water supply electricity grids and transportation networks have been for a long time But while these other infrastructures are relatively static the Internet is undergoing swift and fundamental change Notably the Internet is going mobile The world has some 6.7 billion humans 4 billion mobile phones and 1.7 billion Internet users The two most populous continents Asia and Africa have relatively low Internet penetration and hold the greatest potentials for growth Their mobile phone users by far outnumber their Internet users and the numbers are growing rapidly China and India are each gaining about half a dozen million new phone users per month Users across the globe as a whole increasingly embrace mobile Internet devices with smart phone sales are starting to outnumber PC sales Indeed these and other facts suggest that the Internet stands to gain a substantial mobile component This mega trend towards mobile is enabled by rapid and continuing advances in key technology areas such as mobile communication consumer electronics GPS positioning and computing In short this is the backdrop for this very timely book on moving objects by Xiaofeng Meng and Jidong Chen **Moving Objects Databases** Ralf Hartmut Güting, 2004 **Privacy-preserving Publishing of Moving Objects Databases**, 2004 Moving Objects Databases (MOD) have gained popularity as a subject for research due to the latest developments in the positioning technologies and mobile networking Analysis of mobility data can be used to discover and deliver knowledge that can enhance public welfare For instance a study of traffic patterns and congestion trends can reveal some information that can be used to improve routing and scheduling of public transit vehicles To enable analysis of mobility data a MOD must be published However publication of MOD can pose a threat to location privacy of users whose movement is recorded in the database A user's location at one or more time points can be publicly available prior to the publication of MOD Based on this public knowledge an attacker can potentially find the user's entire trajectory and learn his/her positions at other time points which constitutes privacy breach This public knowledge is a user's quasi identifier (QID) i.e. a set of attributes that can uniquely identify the user's trajectory in the published database We argue that unlike in relational microdata where all tuples have the same set of quasi identifiers in mobility data the concept of quasi identifier must be modeled subjectively on an individual basis In this work we study the problem of privacy preserving publication of MOD We conjecture that each Moving Object (MOB) may have a distinct QID We develop a possible attack model on the published MOD given public knowledge of some or all MOBs We develop a k-anonymity model based on classical k-anonymity which ensures that every object is

indistinguishable with respect to its QID from at least $k - 1$ other objects and show that this model is impervious to the proposed attack model We employ space generalization to achieve MOB anonymity We propose three anonymization algorithms that generate a MOD that satisfies the k anonymity model while minimizing the information loss We conduct several sets of experiments on s

Moving Objects Management Xiaofeng Meng, Zhiming Ding, Jiajie Xu, 2014-04-04 Applications 2nd Edition focuses on moving object management from the location management perspective to determining how constantly changing locations affect the traditional database and data mining technology The book specifically describes the topics of moving objects modeling and location tracking indexing and querying clustering location uncertainty traffic aware navigation and privacy issues as well as the application to intelligent transportation systems Through the book the readers will be made familiar with the cutting edge technologies in moving object management that can be effectively applied in LBS and transportation contexts The second edition of this book significantly expands the coverage of the latest research on location privacy traffic aware navigation and uncertainty The book has also been reorganized with nearly all chapters rewritten and several new chapters have been added to address the latest topics on moving objects management Xiaofeng Meng is a professor at the School of Information Renmin University of China Zhiming Ding is a professor at the Institute of Software Chinese Academy of Sciences ISCAS Jiajie Xu is an assistant professor at the ISCAS

Introduction to Databases Peter Revesz, 2010-01-11 Introduced forty years ago relational databases proved unusually successful and durable However relational database systems were not designed for modern applications and computers As a result specialized database systems now proliferate trying to capture various pieces of the database market Database research is pulled into different directions and specialized database conferences are created Yet the current chaos in databases is likely only temporary because every technology including databases becomes standardized over time The history of databases shows periods of chaos followed by periods of dominant technologies For example in the early days of computing users stored their data in text files in any format and organization they wanted These early days were followed by

information retrieval systems which required some structure for text documents such as a title authors and a publisher The information retrieval systems were followed by database systems which added even more structure to the data and made querying easier In the late 1990s the emergence of the Internet brought a period of relative chaos and interest in unstructured and semistructured data as it was envisioned that every web page would be like a page in a book However with the growing maturity of the Internet the interest in structured data was regained because the most popular websites are in fact based on databases The question is not whether future data stores need structure but what structure they need *Advances in Spatial and Temporal Databases* Christian S. Jensen, Markus Schneider, Bernhard Seeger, Vassilis J. Tsotras, 2003-05-15 The Seventh International Symposium on Spatial and Temporal Databases SSTD 2001 held in Redondo Beach CA USA July 12 15 2001 brought together leading researchers and developers in the area of spatial temporal and spatio temporal databases to discuss the state of the art in spatial and temporal data management and applications and to understand the challenges and search directions in the advancing area of data management for moving objects The symposium served as a forum for disseminating research in spatial and temporal data management and for maximizing the interchange of knowledge among researchers from the established spatial and temporal database communities The exchange of research ideas and results not only contributes to the academic arena but also benefits the user and commercial communities SSTD 2001 was the seventh in the series of symposia that started in Santa Barbara a dozen years ago and has since been held every two years in Zurich Singapore Portland Maine Berlin and Hong Kong By 1999 the series had become well established as the premier international forum devoted solely to spatial database management and it was decided to extend the scope of the series to also cover temporal database management This extended scope was chosen due in part to the increasing importance of research that considers spatial and temporal aspects jointly *Moving Objects Databases* Ralf Hartmut Güting, 2004
