dependability research as mathematical models evaluation of software probabilistic assessment methodologies tools and technologies Intelligent and soft computing methods help to resolve fundamental problems of dependability analysis which are caused by the fact that in contemporary computer systems it is often difficult to find a relation between system elements and system events the relation between reasons and results and it is even more difficult to define strict mathematical models with analytical relationships between such phenomena **22nd DASC** ,2003 The proceedings of this conference include flight critical systems intelligent interactive systems software engineering comm nav surveillance air traffic management open systems architecture space systems UAV and synthetic vision and situational awareness Proceedings ,2003
