Sexism Science:

A Lab of One's Own Rita Colwell, Sharon Bertsch McGrayne, 2021-08-17 Colwell the first female director of the National Science Foundation discusses the entrenched sexism in science the elaborate detours women have taken to bypass the problem and how to fix the system When she first applied for a graduate fellowship in bacteriology she was told We don't waste fellowships on women Over her six decades in science as she encounters other women pushing back against the status quo Colwell also witnessed the advances that could be made when men and women worked together Here she offers an astute diagnosis of how to fix the problem of sexism in science and a celebration of the women pushing back *Philosophy of Science after Feminism* Janet A. Kourany, 2010-09-09 In this monograph Janet A Kourany argues for a philosophy of science more socially engaged and socially responsible than the philosophy of science we have now The central questions feminist scientists philosophers and historians have been raising about science during the last three decades form Kourany's point of departure and her response to these questions builds on their insights This way of approaching science differs from mainstream philosophy of science in two crucial respects it locates science within its wider societal context rather than treating science as if it existed in a social political and economic vacuum and it points the way to a more comprehensive understanding of scientific rationality one that integrates the ethical with the epistemic Kourany develops her particular response dubbed by her the ideal of socially responsible science beyond the gender related questions and contexts that form its origins and she defends it against a variety of challenges epistemological historical sociological economic and political She ends by displaying the important new directions philosophy of science can take and the impressive new roles philosophers of science can fill with the approach to science she offers **Feminism and Science** Nancy Tuana, 1989-11-22 thoughtful critiques of the myriad issues between women and science *Belles Lettres* Outstanding collection of essays that raise the fundamental questions of gender in what we have been taught are objective sciences *WATERwheel* all of the articles are well written informative and convincing Admirable editorial work makes this anthology unusually helpful for scholars and students Highly recommended *Choice* Questioning the objectivity of scientific inquiry this volume addresses the scope of gender bias in science The contributors examine the ways in which science is affected by and reinforces sexist biases The essays reveal science to be a cultural institution structured by the political social and economic values of the culture within which it is practiced **Feminism, Science, and the Philosophy of Science** J. Nelson, 2012-12-06 *Feminism Science and the Philosophy of Science* brings together original essays by both feminist and mainstream philosophers of science that examine issues at the intersections of feminism science and the philosophy of science Contributors explore parallels and tensions between feminist approaches to science and other approaches in the philosophy of science and more general science studies In so doing they explore notions at the heart of the philosophy of science including the nature of objectivity truth evidence cognitive agency scientific method and the relationship between science and values [The Science Question in](#)

Feminism Sandra G. Harding, 1986 Can science steeped in Western masculine bourgeois endeavors nevertheless be used for emancipatory ends In this major contribution to the debate over the role gender plays in the scientific enterprise Sandra Harding pursues that question challenging the intellectual and social foundations of scientific thought Harding provides the first comprehensive and critical survey of the feminist science critiques and examines inquiries into the androcentrism that has endured since the birth of modern science Harding critiques three epistemological approaches feminist empiricism which identifies only bad science as the problem the feminist standpoint which holds that women's social experience provides a unique starting point for discovering masculine bias in science and feminist postmodernism which disputes the most basic scientific assumptions She points out the tensions among these stances and the inadequate concepts that inform their analyses yet maintains that the critical discourse they foster is vital to the quest for a science informed by emancipatory morals and politics

Has Feminism Changed Science? Londa Schiebinger, 2001-04-02 Do women do science differently And how about feminists male or female The answer to this fraught question carefully set out in this provocative book will startle and enlighten every faction in the science wars Has Feminism Changed Science is at once a history of women in science and a frank assessment of the role of gender in shaping scientific knowledge Science is both a profession and a body of knowledge and Londa Schiebinger looks at how women have fared and performed in both instances She first considers the lives of women scientists past and present How many are there What sciences do they choose or have chosen for them Is the professional culture of science gendered And is there something uniquely feminine about the science women do Schiebinger debunks the myth that women scientists because they are women are somehow more holistic and integrative and create more cooperative scientific communities At the same time she details the considerable practical difficulties that beset women in science where domestic partnerships children and other demanding concerns can put women's and increasingly men's careers at risk But what about the content of science the heart of Schiebinger's subject Have feminist perspectives brought any positive changes to scientific knowledge Schiebinger provides a subtle and nuanced gender analysis of the physical sciences medicine archaeology evolutionary biology primatology and developmental biology She also shows that feminist scientists have developed new theories asked new questions and opened new fields in many of these areas

M. Ruse, 2012-12-06 Philosophy of biology has a long and honourable history Indeed like most of the great intellectual achievements of the Western World it goes back to the Greeks However until recently in this century it was sadly neglected With a few noteworthy exceptions someone wishing to delve into the subject had to choose between extremes of insipid vitalism on the one hand and sterile formalizations of the most elementary biological principles on the other Whilst philosophy of physics pushed confidently ahead the philosophy of biology languished In the past decade however things have changed dramatically A number of energetic and thoughtful young philosophers have made real efforts to master the outlines and details of contemporary biology They have shown that many stimulating problems emerge when analytic skills are turned towards the life sciences particularly if one does not feel constrained to stay only with theoretical parts of biology but can range over to more medical parts of the spectrum At the same time biology itself has had one of the most fruitful yet turbulent periods in its whole history and more and more biologists have grown to see that many of the problems they face take them beyond the narrow confines of empirical science a broader perspective is needed **Insights on Science Journalism** Felicity Mellor, 2024-03-14 Bringing together experts from a range of disciplines this collection critically examines science journalism paying special attention to the points of tension that science journalists navigate in their work today Faced with the twin crises of climate change and a global pandemic science journalism has never before been so prominent This book showcases perspectives that transcend the particulars of the specific news events and outlets studied in order to provide an overview of the key areas of scholarly interest regarding the nature of science journalism The volume is organised into three sections the first provides historical case studies illustrating the demarcation of science journalism from science as science journalism emerged as a recognisable news beat in the twentieth century the second examines the relationship between science journalists and their sources particularly scientists and the mediation of this relationship through organisations foreign journalism and political constraints and the final section considers the style and voice of science journalism content Case studies and original empirical research are compiled from across the globe including the UK US Germany Vietnam and Russia and are synthesised to offer a readable and engaging insight into the beat Insights on Science Journalism is recommended reading for advanced students and researchers of science journalism and communication and will also appeal to those working in the

Kuipers, Anne Ruth Mackor, 2023-03-13 This collection of 17 articles offers an overview of the philosophical activities of a group of philosophers who have been working at the Groningen University The meta methodological assumption which unifies the research of this group holds that there is a way to do philosophy which is a middle course between abstract normative philosophy of science and descriptive social studies of science On the one hand it is argued with social studies of science that philosophy should take notice of what scientists actually do On the other hand however it is claimed that philosophy can and should aim to reveal cognitive patterns in the processes and products of scientific and common sense knowledge Since it is thought that those patterns can function as guidelines in new research and or in research in other disciplines philosophy can nevertheless hold on to the normative aim which is characteristic of classical philosophy of science Compared to this common assumption there is a diversity of subjects Some papers deal with general problems of science knowledge cognition and argumentation others with topics relating to foundational problems of particular sciences Therefore this volume is of interest to philosophers of science to philosophers of knowledge and argumentation in general to philosophers of mind as well as for scientists working in the physical and applied sciences biology psychology and economy who are interested in the foundations of their disciplines After a foreword by Leszek Nowak and a general introduction by the editors the book is divided into four parts with special introductions I Conceptual Analysis in Service of Various Research Programmes Henk Zandvoort Rein Vos Rick Looijen Gerben Stavenga Ren e Dalitz II The Logic of the Evaluation of Arguments Hypotheses Default Rules and Interesting Theorems Erik Krabbe Theo Kuipers Alfons Keupink Maarten Janssen Yao Hua Tan Bert Hamminga III Three Challenges to
