Utopia has become a dirty word in recent scholarship on modernism architecture urban planning and gender studies Many utopian designs now appear impractical manifesting an arrogant disregard for the lived experiences of the ordinary inhabitants who make daily use of global public and private spaces The essays in *Embodied Utopias* argue that the gendered body is the crux of the hopes and disappointments of modern urban and suburban utopias of the Americas Europe and Asia

[Le Corbusier's Venice Hospital Project](#) Mahnaz Shah,2017-05-15 While Le Corbusier s urban projects are generally considered confrontational in their relationship to the traditional urban fabric his proposal for the Venice hospital project remained an exercise in preserving the medieval fabric of the city of Venice through a systemic replication of its urban tissue This book offers a detailed study of Le Corbusier s Venice hospital project as a plausible built entity In addition it analyses it in the light of its supposed affinity with the medieval urban

configuration of the city of Venice No formal attempt to date has been made to critically analyse the hospital project's design considerations in comparison to the medieval urban configuration of the city of Venice Using a range of methodologies including those from architectural theory and history using archival resources on site analysis and interviews with important resource persons this book is an interpretation of the conceptual basis for Le Corbusier's understanding of the structural formulation of the city of Venice as mentioned in *The Radiant City* 1935 In doing so it deciphers the diagrammatic analysis of the city structure found in this work into a set of coherent design modules that were applied in the hospital project and that could become a point of further investigation Architects and other architecturally interested laypeople with an interest in Venice will find the book a valuable addition to their knowledge For architectural historians the book makes an important link between modernism and the historically grown Venice

Basics Urban Building Blocks Thorsten Bürklin, Michael Peterek, 2017-05-22 Our cities and neighborhoods are composed of urban building blocks and a knowledge of these elementary components is part of the basic equipment of city planning It is absolutely essential for urban design that one understands their form and structure their functional conditions and the differentiation into private and public spheres as well as the ways they are networked into their surroundings Study of these city building blocks represents a first step toward understanding and successfully developing the built structure of the city as a physical and social habitat Themes are the row the block the courtyard the block in reverse the passageway the line the solitaire the group the shed

The Publishers' Trade List Annual, 1974 **Big House Little City** Benedict Zucchi, 2023-09-08 Shortlisted for the Architectural Book Awards 2024 Combining architectural and urban thinking in an unusual and engaging way this book presents an integrated approach to architectural theory and design Leon Battista Alberti's assertion in his famous Renaissance treatise that the city is like a big house and the house is in turn like a little city forms the springboard for a series of reflections on architecture's relationship with urbanism and how their once intimate symbiosis

unravelling by International Style Modernism can be recovered. Explicit references to Alberti's house-city phrase have been made by figures as diverse as the architects Louis Kahn, Aldo Van Eyck, Denys Lasdun and Niels Torp, and novelist Italo Calvino. But as the book shows, thinking of buildings as little cities provides a new lens through which to reappraise the contributions of many other architects, including Le Corbusier, Frank Lloyd Wright, Alvar Aalto, Eliel Saarinen, Bernard Rudofsky, Hans Scharoun, Leon Krier, Fumihiko Maki, Charles Correa, and Team 10. In doing so, the author identifies common themes that form an unexpected bridgehead between the urban and architectural approaches of Antiquity, the Middle Ages, Renaissance, and 20th century. The book explores buildings from across the globe, including lesser-known projects such as Wright's unbuilt house in Italy or Saarinen's master plan for Cranbrook Academy, as well as more recent projects by Niels Torp, Behnisch Architekten, Sou Fujimoto, Peter Barber, and WOHA. It concludes with practical case studies of residential, health, education, and workplace projects from different countries, fulsomely illustrated with many drawings and photographs. These show how architectural design, viewed through an urban lens, provides a conceptual framework for breaking down the scale of large buildings and integrating them with their context. And crucially, these also show a very accessible way of explaining evolving designs to the intended users and eliciting their participation in the design process. The book offers a compelling approach to the design of projects at all scales, within an ecological perspective, the sense that big and small cities and buildings must be approached holistically if we are to reverse the degradation and depletion of our habitat, both natural and man-made.
