Markov Random Fields for Vision and Image Processing Andrew Blake, Pushmeet Kohli, Carsten Rother, 2011-07-22 State of the art research on MRFs successful MRF applications and advanced topics for future study This volume demonstrates the power of the Markov random field MRF in vision treating the MRF both as a tool for modeling image data and utilizing recently developed algorithms as a means of making inferences about images These inferences concern underlying image and scene structure as well as solutions to such problems as image reconstruction image segmentation 3D vision and object labeling It offers key findings and state of the art research on both algorithms and applications After an introduction to the fundamental concepts used in MRFs the book reviews some of the main algorithms

for performing inference with MRFs presents successful applications of MRFs including segmentation super resolution and image restoration along with a comparison of various optimization methods discusses advanced algorithmic topics addresses limitations of the strong locality assumptions in the MRFs discussed in earlier chapters and showcases applications that use MRFs in more complex ways as components in bigger systems or with multiterm energy functions The book will be an essential guide to current research on these powerful mathematical tools

Jörg M. Haake, Jose A. Pino, 2002-08-14 Welcome to the 8th International Workshop on Groupware CRIWG 2002 The previous workshops took place in Lisbon Portugal 1995 Puerto Varas Chile 1996 El Escorial Spain 1997 B zios Brazil 1998 Cancun Mexico 1999 Madeira Portugal 2000 and Darmstadt Germany 2001 CRIWG workshops follow a simple recipe for success good papers a small number of participants extensive time for lively and constructive discussions and a high level of cooperation both within and between paper sessions CRIWG 2002 continued this tradition CRIWG 2002 attracted 36 submissions from 13 countries nine of them outside Ibero America Each of the 36 articles submitted was reviewed by at least three members of an internationally renowned Program Committee This year we used a double blind reviewing process i e the reviewers did not know who the authors of the papers were In addition the reviewers were chosen based on their expertise and we also ensured that they came from countries and institutions not related to those of the paper s authors This reviewer assignment worked remarkably well as indicated by the high average confidence value the reviewers gave their own reviews This means that papers were usually reviewed by experts in the paper s topic As a consequence reviews were usually quite extensive and contained many suggestions for provements I would like to thank all the members of the Program Committee for their hard work which I am sure contributed to improving the quality of the final articles

Advances in Pattern Recognition - ICAPR 2001
Sameer Singh, Nabeel Murshed, Walter Kropatsch, 2003-06-29 The paper is organized as follows In section 2 we describe the no orientation discontinuity interfering model based on a Gaussian stochastic model in analyzing the properties of the interfering strokes In section 3 we describe the improved canny edge detector with an ed orientation constraint to detect the edges and recover the weak ones of the foreground words and characters In section 4 we illustrate discuss and evaluate the experimental results of the proposed method demonstrating that our algorithm significantly improves the segmentation quality Section 5 concludes this paper 2 The norm orientation discontinuity interfering stroke model Figure 2 shows three typical samples of original image segments from the original documents and their magnitude of the detected edges respectively The magnitude of the gradient is converted into the gray level value The darker the edge is the larger is the gradient magnitude It is obvious that the topmost strong edges correspond to foreground edges It should be noted that while usually the foreground writing appears darker than the background image as shown in sample image Figure 2 a there are cases where the foreground and background have similar intensities as shown in Figure 2 b or worst still the background is more prominent than the foreground as in Figure 2 c So using only the intensity value is not

enough to differentiate the foreground from the background a b c d e f
