Matrix Calculus And Zero One Matrices Statistical And Econometric Applications:

Matrix Calculus and Zero-One Matrices Darrell A. Turkington, 2005-11-10 The statistical models confronting econometricians are complicated in nature so it is no easy task to apply the procedures recommended by classical statisticians to such models This book presents the reader with mathematical tools drawn from matrix calculus and zero one matrices and demonstrates how the use of their tools greatly facilitates such applications in a sequence of linear econometric models of increasing statistical complexity The book differs from others in that the matrix calculus results are derived from a few basic rules which are generalizations of the rules used in ordinary calculus Moreover the properties of several new zero one matrices are investigated *Generalized Vectorization, Cross-Products, and Matrix Calculus* Darrell A.

Turkington, 2013-02-11 This book presents the reader with new operators and matrices that arise in the area of matrix calculus The properties of these mathematical concepts are investigated and linked with zero one matrices such as the commutation matrix Elimination and duplication matrices are revisited and partitioned into submatrices Studying the properties of these submatrices facilitates achieving new results for the original matrices themselves Different concepts of matrix derivatives are presented and transformation principles linking these concepts are obtained One of these concepts is used to derive new matrix calculus results some involving the new operators and others the derivatives of the operators themselves The last chapter contains applications of matrix calculus including optimization differentiation of log likelihood functions iterative interpretations of maximum likelihood estimators and a Lagrangian multiplier test for endogeneity
