Tutorials on Motion Perception Alexander H. Wertheim, 2012-12-06 From August 24-29 1980 the international Symposium on the Study of Motion Perception Recent Developments and Applications sponsored by NATO and organized by the editors of this book was held in Veldhoven the Netherlands The meeting was attended by about eighty scholars including psychologists neurologists physicists and other scientists from fourteen different countries During the symposium some fifty research papers were presented and a series of tutorial review papers were read and discussed The research presentations have been published in a special issue of the international journal of psychonomics Acta Psychologica Vol 48 1981 The present book is a compilation of the tutorial papers The tutorials were arranged around early versions of the chapters now appearing in this book The long discussions at the Veldhoven tutorial sessions resulted in extensive revisions of the texts prior to this publication Unfortunately this led to a delay in publication but we feel that this was justified by a greater depth of understanding which in our opinion has significantly increased the quality of the book As they now stand the chapters cover most of the issues relevant to the study of motion perception Also they clearly reflect the intensive exchange of knowledge that took place during the symposium As

such we think that this book can be used both as an advanced text for students and scientists alike and as a comprehensive reference source

Advances In Structural And Syntactic Pattern Recognition - Proceedings Of The International Workshop Horst Bunke, 1993-02-23 Pattern recognition is an active area of research with many applications some of which have reached commercial maturity Structural and syntactic methods are very powerful They are based on symbolic data structures together with matching parsing and reasoning procedures that are able to infer interpretations of complex input patterns This book gives an overview of the latest developments and achievements in the field **Official Gazette of the United States Patent and Trademark Office** United States. Marcos R. Vieira, Vassilis J. Tsotras, 2013-10-15 This brief presents several new query processing techniques called complex motion pattern queries specifically designed for very large spatio temporal databases of moving objects The brief begins with the definition of flexible pattern queries which are powerful because of the integration of variables and motion patterns This is followed by a summary of the expressive power of patterns and flexibility of pattern queries The brief then presents the Spatio Temporal Pattern System STPS and density based pattern queries STPS databases contain millions of records with information about mobile phone calls and are designed around cellular towers and places of interest Density based pattern queries capture the aggregate behavior of trajectories as groups Several evaluation algorithms are presented for finding groups of trajectories that move together in space and time i.e. within a predefined distance to each other Finally the brief describes a generic framework called DivDB for diversifying query results Two new evaluation methods as well as several existing ones are described and tested in the proposed DivDB framework The efficiency and effectiveness of all the proposed complex motion pattern queries are demonstrated through an extensive experimental evaluation using real and synthetic spatio temporal databases This clear evaluation of new query processing techniques makes Spatio Temporal Database a

The Motion Aftereffect George Mather, Frans Verstraten, S. M. Anstis, 1998 Motion perception lies at the heart of the scientific study of vision The motion aftereffect MAE is the appearance of directional movement in a stationary object or scene after the viewer has been exposed to visual motion in the opposite direction For example after one has looked at a waterfall for a period of time the scene beside the waterfall may appear to move upward when one's gaze is transferred to it Although the phenomenon seems simple research has revealed complexities in the underlying mechanisms and offered general lessons about how the brain processes visual information In the 1990s alone more than 200 papers have been published on MAE largely inspired by improved techniques for examining brain electrophysiology and by emerging new theories of motion perception

Higher-Order Processing in the Visual System Gregory R. Bock, Jamie A. Goode, 2008-04-30 Foremost neurophysiologists and psychophysicists provide pertinent information on the nature of representation at the earliest stages as this will constrain the disposition of all subsequent processing This processing is discussed in several different types of visual perception

Swarm Intelligence Andrew Schumann, 2020-11-03. The notion of swarm intelligence was introduced for describing decentralized and self-organized behaviors of groups of animals. Then this idea was extrapolated to design groups of robots which interact locally to cumulate a collective reaction. Some natural examples of swarms are as follows: ant colonies, bee colonies, fish schooling, bird flocking, horse herding, bacterial colonies, multinucleated giant amoebae, *Physarum polycephalum*, etc. In all these examples, individual agents behave locally with an emergence of their common effect. An intelligent behavior of swarm individuals is explained by the following biological reactions to attractants and repellents. Attractants are biologically active things such as food pieces or sex pheromones which attract individuals of swarm. Repellents are biologically active things such as predators which repel individuals of swarm. As a consequence, attractants and repellents stimulate the directed movement of swarms towards and away from the stimulus, respectively. It is worth noting that a group of people such as pedestrians follow some swarm patterns of flocking or schooling. For instance, humans prefer to avoid a person considered by them as a possible predator, and if a substantial part of the group in the situation of escape panic, not less than 5% changes the direction, then the rest follows the new direction too. Some swarm patterns are observed among human beings under the conditions of their addictive behavior such as the behavior of alcoholics or gamers. The methodological framework of studying swarm intelligence is represented by unconventional computing, robotics, and cognitive science. In this book, we aim to analyze new methodologies involved in studying swarm intelligence. We are going to bring together computer scientists and cognitive scientists dealing with swarm patterns from social bacteria to human beings. This book considers different models of simulating, controlling, and predicting the swarm behavior of different species from social bacteria to humans.
