Ecological Responses to the 1980 Eruption of Mount St. Helens

Virginia H. Dale, Frederick J. Swanson, Charles M. Crisafulli, 2006-01-16 Recon guring Disturbance Succession and Forest Management The Science of Mount St Helens When Mount St Helens erupted on May 18 1980 it did more than just recon gure a large piece of Cascadian landscape It also led to dramatic revisions in our perspectives on disturbances secondary succession and forestry practices The Mount St Helens landscape turned out to be a far more complex place than the moonscape that it initially appeared to be Granted a large area was literally scoured and sterilized and that vast expanse of newly formed rock mud ows and avalanche debris up and down the mountain made the Mount St Helens landscape unique

But I still remember my surprise when as I stepped out of the helicopter on first landing within the extensive devastated zone I saw hundreds of plants pushing their way up through the mantle of tephra. Surviving organisms were stunning in their diversity, abundance, and the mechanisms by which they survived. They persisted as whole organisms living below ground, encased within late persisting snowbanks and buried in lake and stream sediments. They survived as rhizomes transported along with the massive landslide that accompanied the eruption and as stems that suffered the abrasion of mud flows. Mud flows coated nurse logs covered with tree seedlings and then redeposited them on the floor of a forested river terrace. Millions, perhaps billions of plants survived as rootstocks and rhizomes that pushed their way up through the tephra and others survived on the bases of uprooted trees. *Mount St. Helens* Charles Cutler, Irwin Siegelman, Virginia Fleet, W. Mountain of Fire Rebecca E. F. Barone, 2024-05-14

Mountain of Fire is the narrative nonfiction account of the violent volcanic eruption of Mount St Helens on May 18, 1980: the story of the people who died, those who survived, and the heroes who fought to raise an alarm. For weeks the ground around Mount St Helens shuddered like a dynamite keg ready to explode. There were legends of previous eruptions: violent fire, treacherous floods, and heat that had scoured the area. But the shaking and swelling was unlike any volcanic activity ever seen before. Day and night scientists tried to piece together the mountain's clues, yet nothing could prepare them for the destruction to come. The long dormant volcano seethed away, boiling rock far below the surface. Washington's governor Dixie Lee Ray understood the despair that would follow from people being forced from their homes. How and when should she give orders to evacuate the area? And would that be enough to save the people from the eruption of Mount St Helens? Includes a QR code for a website featuring eye-catching photos of the eruption.
