Normativity Judith Jarvis Thomson, 2015-12-20 Judith Jarvis Thomson's *Normativity* is a study of normative thought She brings out that normative thought is not restricted to moral thought Normative judgments divide into two sub kinds the evaluative and the directive but the sub kinds are larger than is commonly appreciated Evaluative judgments include the judgments that such and such is a good umbrella that Alfred is a witty comedian and that Bert answered Carol's question correctly as well as the judgment that David is a good human being Directive judgments include the judgment that a toaster should toast evenly that Edward ought to get a haircut and that Frances must move her rook as well as the judgment that George ought to be kind to his little brother Thomson describes how judgments of these two sub kinds interconnect and what makes them true when they are true Given the extensiveness of the two sub kinds of normative judgment our everyday thinking is rich in normativity and moreover there is no gap between normative and factual thought The widespread suspicion of the normative is therefore in large measure due to nothing deeper than an excessively narrow conception of what counts as a normative judgment

for the People Andreas Weigend draws on his years as a consultant for commerce education healthcare travel and finance companies to outline how Big Data can work better for all of us As of today how much we benefit from Big Data depends on how closely the interests of big companies align with our own Too often outdated standards of control and privacy force us into unfair contracts with data companies but it doesn't have to be this way Weigend makes a powerful argument that we need to take control of how our data is used to actually make it work for us Only then can we the people get back more from Big Data than we give it Big Data is here to stay Now is the time to find out how we can be empowered by it The English Illustrated Magazine ,1888
