A History of Economic Science in Japan Aiko

Ikeo, 2014-04-03 Japanese economists began publishing scientific papers in renowned journals including *Econometrica* in the 1950s and had made their significant contributions to the sophistication of general equilibrium analysis by intensive use of a variety of mathematical instruments. They had contributed significantly to the transformation of neoclassical economics. This book examines how it became possible for Japanese economists to do so by shedding light on the professional discussion of the international gold standard and parity policies in the early twentieth century, the acceptance of mathematical economics in the following period, the impact of establishment of the Econometric Society, 1930, and the swift distribution of theory-oriented economics journals since 1930. This book also includes topics on the historical research of the Japanese foundations of modern economics, the transformation of the economics of Keynes into Keynesian economics, Japanese developments in econometrics, and Martin Bronfenbrenner's visit to Japan in the post WWII period. This book provides insight into the economic research done by Japanese scholars in the international context. It traces how during the period 1900-1960 economics was harmonized with mathematics and a standard economics was re-shaped on the basis of mathematics thanks to economists' appetite for rigor and will help to contribute to existing literature.
